Keep students safe with a real-time AI web filter

The K-12 web filter uses real-time artificial intelligence to understand context as digital learning happens. With a tool that is easy to install and monitor, your school can create meaningful and safe digital learning environments in the classroom or at home.

Benefits

Adopt one-of-a-kind technology

Patented AI analyzes images, video and text in real-time and intelligently filters, blurs and mutes as needed.

Manage easily

With a setup of less than 20 minutes and the extra protection of real-time AI filtering management is made simple.
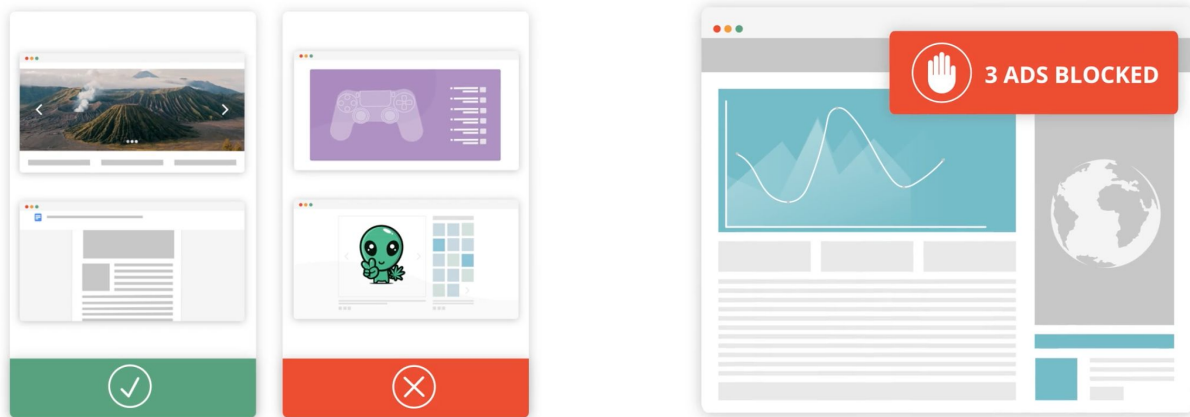

Protect student data and information

Create a secure online environment with technology that blocks ads and anonymizes Google searches so that students' data is not tracked.

Put instructional decision making back with teachers instead of clogging your inbox

- Teachers can approve sites if students raise an issue with a blocked site used in research and academic work.
- No need for clearing numerous teacher requests to approve sites for learning.

Features

IT admin dashboard

- See the number of real-time detections.
- View snapshots of blocked sites, trends, filtered images and videos.

Student wellness

- Get alerts for students at risk who need digital citizenship guidance or mental health assistance.
- Zoom in on a high-risk student's searches so teachers and parents can provide appropriate support when necessary.

Admin reports

- See allowed and blocked sites students tried to access at school or during remote learning.
- Click to quickly add a site to the allowed list.

Student safety and security online is a critical part of a positive learning experience. A web filter that uses AI to intelligently read and adapt makes the most impact. Students get the chance to access useful content without being blocked from sites altogether, while their school team ensures they are protected. By helping students navigate digital learning at school and at home, each learner can be successful.

A comprehensive real-time AI web filter that's easy to manage

Deledao ActiveScan, presented by Hāpara is the only tool that understands context in real-time across digital learning. With quick installation, award-winning data privacy, a focus on student wellness and management options for teachers, it's the best solution for admins.
