Based on period from:	07/03/2018
Total Expense	0.35%
Transaction Costs	0.08%
Total Investment Charge	0.43%
1 Year Total Expense	0.35%

Total Expense (TER): This ratio shows the charges, levies and fees relating to the management of the portfolio and is expressed as a percentage of the average net asset value of the portfolio, calculated over the period shown and annualised to the most recently completed quarter. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER should not be regarded as an indication of future TERs.

Transaction Costs (TC): This ratio shows the percentage of the value of the fund incurred as costs relating to the buying and selling of the fund's underlying assets. TC are a necessary cost in administering the fund and impacts fund returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, investment decisions of the investment manager and the TER.

Total Investment Charges (TIC): This ratio is simply the sum of the TER and TC, showing the percentage of the value of the fund incurred as costs relating to the investment of the fund. It should be noted that performance figures account for all costs included in the TIC ratio, so you should not deduct the TIC from performance figures, the performance is already net of the TIC.

Commentary

Fund review

The fund performed in line with the Feeder Fund and the index over the quarter.

Market overview

Global markets were dominated by the impact of the Coronavirus (COVID-19). The impact of this pandemic has reached every asset class and continent, except Antarctica, around the globe. Economic activity had virtually stopped during March 2020 in much of the world. Central banks and governments are all in crisis mode, crafting and implementing plans to support economies, whilst tackling their primary focus of containing the virus during this period. In Q1 2020, MSCI EMEA dropped -36.2% behind MSCI EM (-25.4%) and MSCI World (-20.7%). MSCI EMEA had dropped briefly below its Global Financial Crisis low. This quarter was MSCI EMEA's worst ever quarter and March 2020 its worst ever month. The South African Reserve Bank took three drastic measures in supporting the local economy. The first was a 100bp cut in the key policy rate to 5.25% on 19 March 2020. Secondly, the SARB embarked on a mini Quantitative Easing as they announced secondary market purchases of government bonds and lastly, proposals to relax liquidity and capital requirements. Moody's cut South Africa's sovereign credit rating to sub-investment grade which has weakened the rand and will trigger passive bond outflows based on the World Government Bond Index exclusion which has been delayed until end-April. Local indices were down for Q1 with Top 40 (-19.2%), All Share (-21.4%) and the Capped SWIX (-26.6%). ALBI (-8.7%), however the STeFI (+1.7%).

Looking ahead

COVID-19 coverage will continue to dominate the headlines and has likely put the global economy into a recession. We will continue to see the impact of lockdowns feed into global growth and revisions on GDP figures with many large and small corporates facing severe weakening of their balance sheets. Consensus expectations are currently for the global economy to recover in 2021 and indeed for this to begin in the second half of 2020. We believe investors should focus on liquid market segments with risk dialled down compared with market benchmarks whilst keeping an eye on attractive entry point during the second half of 2020.
