Data Anonymization for Data Residency

| NO	NO	PROTECTION
APPLICATION DEVELOPMENT	API OR PLUGIN	FOR EVERYTHING

With so many applications hosted in the cloud, there is an increasing concern of sensitive data crossing home-region borders. Protecting the privacy of customer information is no longer just the right thing to do. With the introduction of the GDPR, CCPA, Bill 64 and other privacy legislation, it is a legal requirement with stiff penalties for non-compliance.

DataStealth allows enterprises to define and execute on their data protection and data residency policies and procedures to ensure sensitive data is appropriately secured and protected by remaining in full control of their data. With DataStealth, personally identifiable information never leaves an environment without explicit consent and full control over where it goes, how it is protected, and when it can be reconstituted. **NEVER**.

It's that simple!
