

DEVOPS DEPLOYMENT

Microsoft's Azure DevOps enables software engineering teams to implement best practice DevOps solutions throughout application planning, development, delivery, and operations. Marquam specializes in assisting you to establish the right combination of DevOps technologies, culture, and processes to enable continual software delivery and better value for customers. In today's reality of remote engineering Marquam can help you achieve the engineering velocity to drive ROI and competitive advantage from custom software development.

ROADMAP

Azure DevOps is an end-to-end solution combining multiple tools such as Kanban Boards, GitHub, Azure Pipelines and Visual Studio. Marquam will assess your organization's DevOps capabilities and create a detailed roadmap that lets you grow into the process and culture changes required. We will outline tasks and milestones necessary for a successful DevOps deployment.

DEPLOYMENT

Marquam will configure Azure DevOps to suit your organization's unique needs. We will define processes for planning and tracking work across teams and projects. We will also establish CI/CD to continuously build, test and deploy to any platform in Azure. We will increase collaboration amongst team members by implementing software code-to-cloud workflows. If you already use on-premises solutions, we will help you migrate to the cloud. If you already use Azure DevOps and want to leverage its capabilities more, we will assist in the detailed configuration that is necessary.

REPORTS & DASHBOARDS

Azure DevOps has its own reporting capabilities but also has APIs which can be consumed in Power BI. Marquam can create reports and dashboards to allow you to analyze your DevOps velocity. All reports can be embedded in Microsoft Teams ensuring a consistent collaboration platform for all users.

Book a meeting with Marquam to get started.
