## Kissflow Low-Code

# Bringing Business & IT leaders **together** to Digitize Business Operations

Amazing transformation can be achieved when right people from across the organization come together to translate their ideas into real-time applications. But most organizations fail to leverage the domain expertise of their business users when it comes to building applications. As a result, today's IT teams spend nearly 60% of their time taking up ad-hoc requests to optimize internal business operations. That's where Kissflow Low-Code comes in.

Kissflow offers Business users the simplicity to configure custom applications while empowering the IT teams to customize, integrate, and extend business applications - all on one powerful, easy-to-use, and thoughtfully designed platform. With this new paradigm, you can feel confident about getting your business and IT leaders to work collaboratively and build applications in an agile, simple and cost-effective manner.

This is truly, the Power of Low-Code - Simplified for all!

**“Thousands of Leading Businesses  
Modernize, Digitize, and Automate  
Work With Kissflow”**

# With Kissflow Low-Code You Can

## Modernize

Build apps with out-of-the-box capabilities, and deliver them quickly

## Automate

Harness the power of automation to carry out repetitive processes

## Digitize

Cut down redundant steps, reinvent, and meet user demands faster

## Why Kissflow Low-Code?

Kissflow Low-Code lets you build all the applications that your business would need catering to every organizations' unique needs. You can modernize, automate, and digitize your enterprise-grade applications at scale or plug the gaps in your application with custom built applications that seamlessly integrate with your back-end systems like ERP, CRM and other core systems.

# Key Features

## Application Builder

Design tailor-made applications from scratch, or use pre-built templates that suit your needs with minimal coding.

## Application Deployment

Validate and deploy applications, extend the code, modify your app's capabilities, and keep releasing new builds seamlessly.

## Extensive Integrations

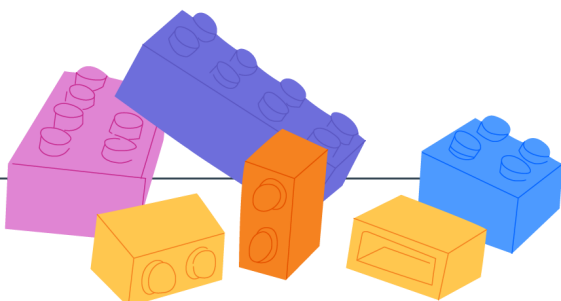

Get the most out of your app by seamlessly connecting it with widely used ERP, CRM, and other core utility platforms.

## Custom UI

Build pages with forms, widgets, and set customized landing pages based on users' roles and responsibilities.

## Developer Sandbox

Optimize application design, identify bugs, and deliver a streamlined developer experience by testing collaboratively on a central platform.

# Key Benefits

## Innovate Endlessly

Design and innovate apps that look and act 100% the way you want them to. Lack of time and resources can never be a plausible excuse with the power of low-code

## End Shadow IT

Enjoy enterprise-level security and features which tie back to employee productivity and development time

## Manage Technical Debt

Simplify application maintenance by allowing the low-code platform to automatically manage upgrades, security certifications, regulatory checks, and performance

## Build Agility

Adapt and respond to market changes and new opportunities using innovative, digital solutions that solve business problems
