

HOW GOOD IS YOUR CYBER HYGIENE?

Cybersecurity experts predict there will be a cyber attack incident every 11 seconds.

As threats continue to evolve, cyber hygiene is important for protecting your organization!

**Don't let your business
fall victim to costly cyberattacks!**

Paying the price

Not only are businesses obligated to pay a hefty price to keep their data private, but it's possible they may lose valuable information that can never be recovered.

4.4 MILLION

The Colonial Pipeline's CEO confirmed that the **company paid hackers \$4.4 million in ransom.**

Restoring valuable data

During a ransomware attack, hackers steal valuable data and threaten to delete or leak that information if a ransom is not paid. In some cases, data is unable to be retrieved if companies do not have a back-up in place.

100 GIGABYTES

During the May 2021 Colonial Pipeline cyberattack, **hackers stole 100 gigabytes of sensitive data**, shutting down the 5,550 mile gasoline pipeline.

Employees out of work

Many businesses rely on technology to collaborate and operate efficiently. Without the ability to access critical files or stay connected with team members, operations slow and money is lost.

OVER 2,500

The New York Times reported that JBS was forced to shut down all nine of their meat processing plants, **affecting over 2,500 employees.**

**We're here to help you implement security protocols
and solutions to keep you and your data safe.**

No organization is safe from a cyber attack, regardless of size or location. Traditional antivirus can no longer keep up with today's threats. Having a firewall is simply not enough.

Our security package combined with 24/7/365 expert monitoring delivers a complete and robust response solution.

Secure Management

Manage and administer user access standards, security policies and procedures.

Secure Access

Identify threat like behavior such as impossible logins, multi-factor bypass, coordinated attacks, and rogue agents.

Secure Services

Monitor, detect, analyze and respond to security threats in real-time, to proactively manage vulnerabilities.

Secure Endpoint

Protect every entry point with a layered approach to safeguard against malware and other threat attempts.

Secure Email

Email protection through encryption, decryption and scanning of emails for phishing, spam, viruses and anomalies.

**DEFEND
YOUR
DATA**

**Now is the time to ensure that your sensitive data is protected.
