

# Welcome to the Edge Economy

Build your private network with Alef Edge Points

**We provide the software and eSIMs needed to launch your own private network in minutes not months!**

**3 main parts of a private LTE network:**

## RAN

Handled by Vertical/Systems Integrators

## TRANSPORT

Delivered by MSPs/Carrier Partners

## EDGE POINT

Taken care of by Alef

**Edge Points empower connectivity as part of Alef's Private Edge Platform. APIs enable you to launch your own private network.**

## Benefits:

**Control**

**Speed**

**Security**

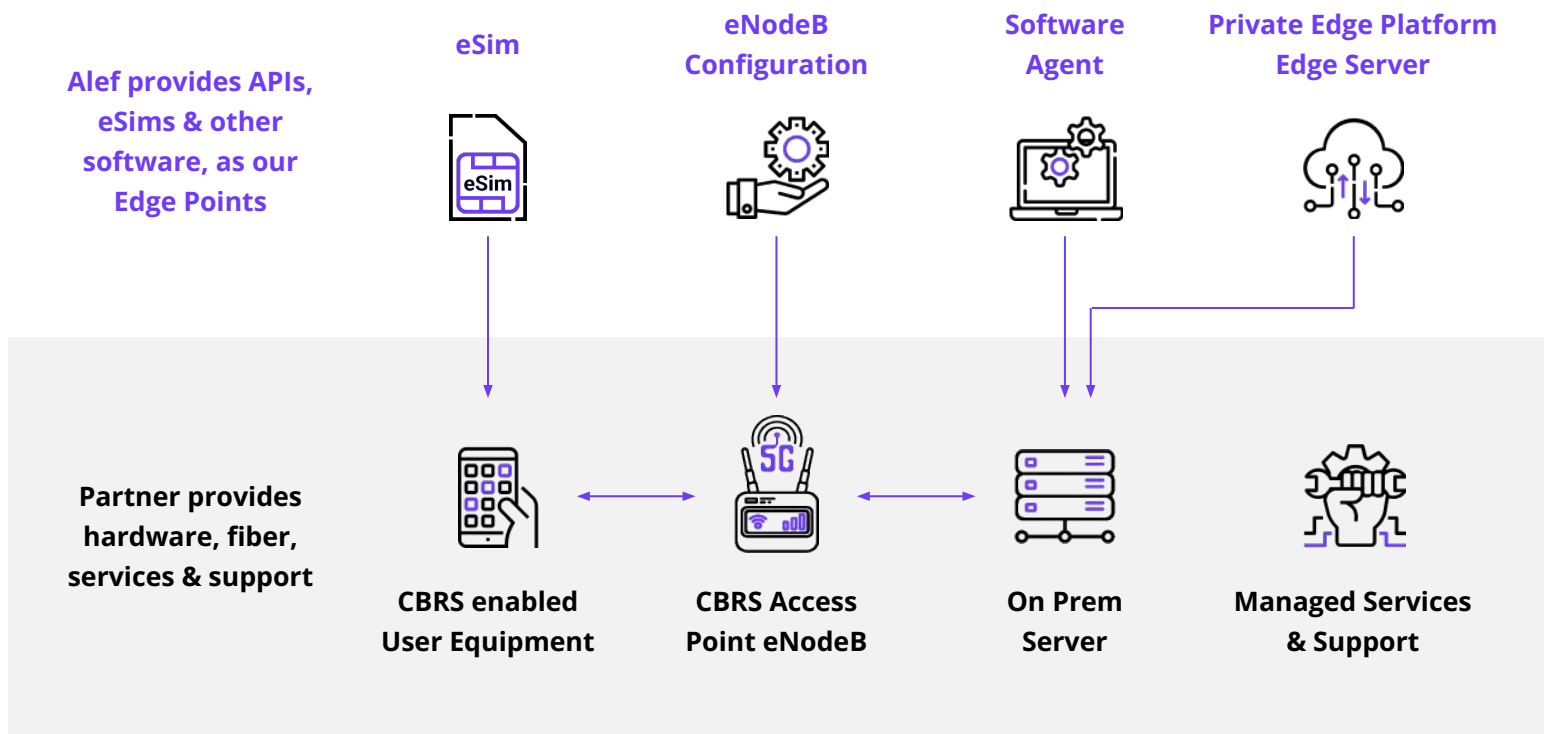

**Cost Savings**

**Roadmap:** APIs will be announced to enable features such as compute, security protection, video, etc.

## Steps to work with Alef

1. Determine RAN and prepare for CBRS provisioning
2. Determine Transport via OTT or local circuit partner and connect to RAN
3. Place your order through Alef Velocity Partners to receive Evolved Packet Core (EPC) and eSIMs
4. Using automatic API triggers from Alef, load our SW on your site
5. Put eSIMs into end user devices

**Roadmap:** APIs will be announced to enable features such as compute, security protection, video, etc.

**Edge Points empower connectivity as part of Alef's Private Edge Platform.**
