

Edge Points for CBRS

We're changing the way we live, work, and play through Alef's Private Edge and API platform — empowering everyone to connect with a purpose.

PRIVATE EDGE

Changing the game of speed and connectivity

Private Edge gives enterprises and organizations the freedom to quickly, easily, and affordably launch their own 5G CBRS network. We're democratizing data and application access like never before. Months of deployment are gone. Now start in a matter of minutes with Alef's patented technologies.

WHY USE ALEF

Deploy in minutes not months

Go from bulky to streamlined and unlock the possibilities of a private network. Now, enterprises and developers can control and access a suite of Edge APIs and deploy their own private network within minutes.

Connect

Automatically connect 4G/5G access points to Private Edge

Activate

Start building your 5G edge applications

Build

Download eSIM and configure security

Benefits:

Control

Customize your private network to do what you need it to

Speed

Provide access to all who need fast, reliable internet

Security

The network restricts accessibility by not being discoverable by devices or users without the proper credentials

Secure Local Breakout

Lower data transport costs by connecting to a near-prem Edge Point
