Job Description

Job Title: Senior Software Engineer (iOS)

Department: IT

Reports To: Head of Development

Summary of Position

A Senior Software Engineer (SSE) for iOS works in our product engineering team with iOS app development. The primary implementation languages are Swift & Objective-C. The main focus of the work is coding (development) but an SSE works with the entire software delivery lifecycle (see duties and responsibilities below).

Essential Duties and Responsibilities

- Develop and document new product features & stories
- Bug fixing
- Code reviews for peers
- Maintain and improve legacy code
- App provisioning (software deployment, CICD pipeline management, etc.)

Competency Required for Position

- Extensive development skills with Swift & Objective-C
- Deep knowledge of the iOS platform and its relevant frameworks (UIKit, XCTest etc.)
- Experience of working with service integrations using REST or GraphQL as protocol
- Experience working with well-known 3rd party libraries such as RxSwift, Alamofire etc.
- Experience from working with Agile development methodologies
- Strong problem-solving mentality
- Excellent written and verbal skills
- At least 5 years documented experience.

Qualifications Required for Position

- Bachelor's or Master's degree in Computer Science or related field
- Fluid Swedish and English.

Work Environment

- The work is office based (Stockholm)
