

SuiteCast

Guest Content on the Big Screen

BRING YOUR OWN CONTENT

Many guests already access their favorite digital media through their own devices. SuiteCast allows them to enhance the experience by playing videos and music from their apps on the big screen hotel TV. By using the widely adopted Chromecast standard, we support most popular services like YouTube, Netflix, Amazon Prime Video, Spotify, and many more.

COMPATIBLE

Simply plug in the SuiteCast Box to convert any television set with an HDMI input into a smart TV. SuiteCast technology was developed with the specific characteristics and restrictions of today's hotel networks in mind, ensuring a smooth set up and viewing experience.

PRIVATE AND SECURE

When connecting guest devices to hotel TVs, each one is securely authenticated to ensure that guests can only play their content on TVs that are in their room.

WELCOME SCREEN

The welcome screen greets the guests with the hotel's corporate design and informs them on how to connect their devices and play videos and music.
