

## OpsAI

The platform for future IT decisions

### Make the right decisions with insights from OpsAI

IT Infrastructure has over time developed into a complex sticky environment. It takes a lot of effort to get an overview to determine the IT estate status for usage, patch levels, application and system dependencies, risk and compliance. IT and Business has grown apart and 'shadow IT' enters your business.

OpsAI is the platform to give you deep insight into your IT estate, allowing your IT and your business to have a common view of your systems and processes.

OpsAI is your future platform for managing your IT estate. Though the built in Cloud-economics estimator it simulates and validates the Cloud-cost scenarios with right sizing and license benefits to ensure a secure and compliant IT infrastructure and automate your operations.

### Why OpsAI

**Specialized Tooling** – Integrated machine learning which enables you to detect, show, model and analyze your current IT and map it to a cloud-based configuration including application, cost and connectivity factors.

**Gain deep insights** – Gives you a comprehensive insight into your infrastructure, revealing technical debt, and security risks, allowing you to intercept risks before they evolve into problems.

**Enable your Cloud Transition** – Provides a detailed overview of your current infrastructure, and detailed information about your usage, technical debt, to calculate the costs of running in cloud. Get insight to make the right decisions when adopting the cloud.

### KEY FEATURES

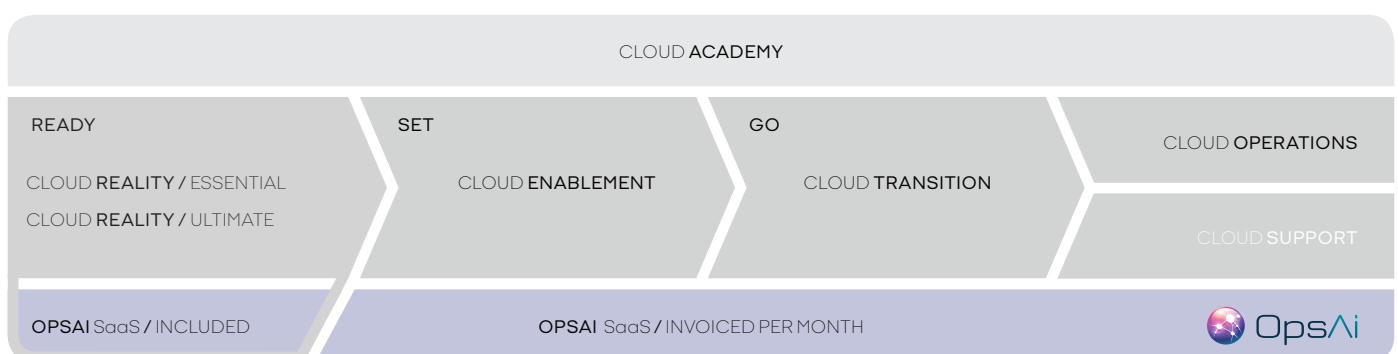

**IT estate assessment** of your IT infrastructure in real time to gain valuable insights into your current technology stack.

**Dynamic Tracking of Assets** which challenges the static nature of most asset management tools, by scanning assets dynamically and real time. Supports export and import of server meta data in CSV format to CMDB.

**AI Operations** - Machine learning creates a comprehensive view of your datacenter, identifying servers and applications at risk, enabling proactive operations.

**Financial Management** - Automated calculation of your Cloud costs to execute financial planning and cost tracking of assets. Including Azure advanced cost calculations, and cloud license benefit options.

**Application Lifecycle** overview, which identifies your applications and supplies a plethora of information which enables and supports your application lifecycle management.
