

Accelerate Dynamics 365 QA with Leapwork Test Automation

You're in good company  ASCENSUS. Mercedes-Benz  PayPal SAINT-GOBAIN  FESTO  BNP PARIBAS

Dynamics 365 ERP and CRM applications are challenging to adequately test ahead of releases. They are often highly customized and integrated across the IT landscape to drive business-critical processes.

It's vital for these applications to function correctly so that you can manage your critical business requirements, from sales pipeline and customer relationship management to demand forecasting, inventory planning and warehouse management.

- Manual testing? Too time-consuming to get full test coverage and keep up with releases.
- Code-based test automation? Requires high maintenance and developer resources.
- Application-specific automation solutions? Won't work across your end-to-end business processes that run across different technologies.

To assure quality of your dynamics-driven processes, your team needs a robust, scalable test automation solution to secure business process continuity with every D365 update.

Why Microsoft recommends Leapwork for Dynamics 365 testing

Visual approach to building and maintaining automated tests

Leapwork's visual test automation platform enables every user - whether they are a tech specialist or business expert - to automate quickly and easily.

This means entire enterprise teams can get up-and-running with Leapwork in just 30 days.

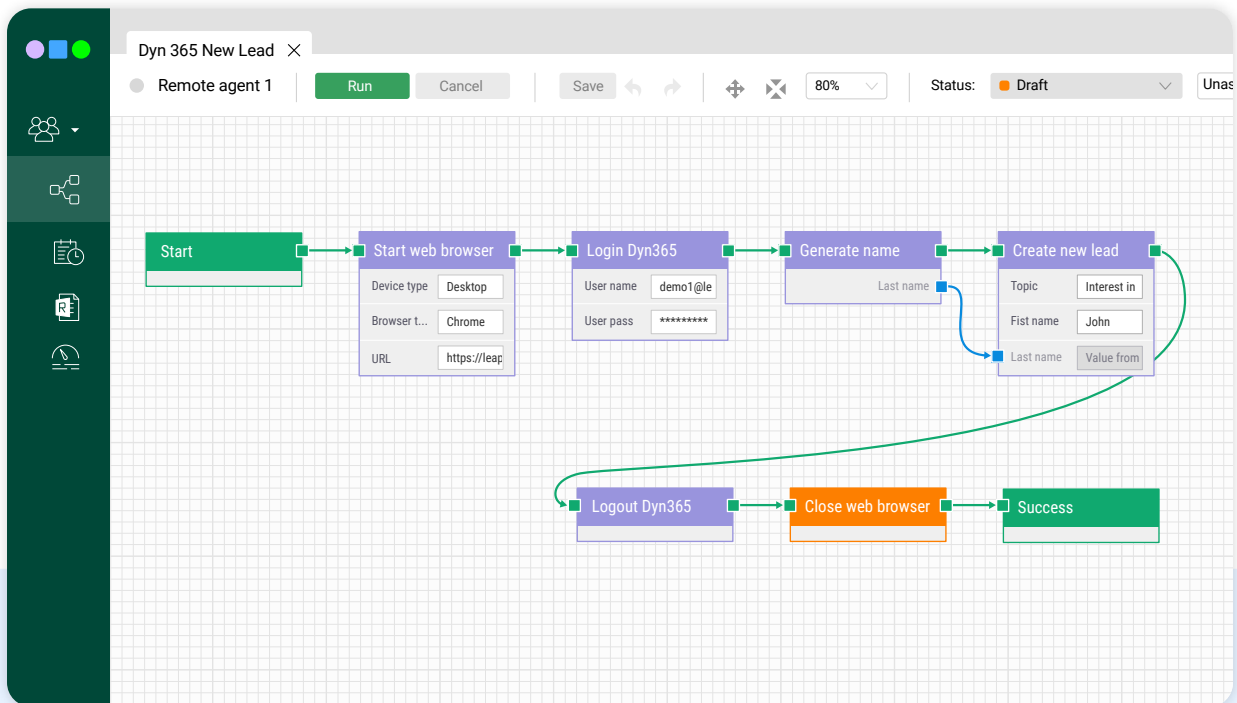

Automate beyond D365 for full business process coverage

Leapwork's cross-tech capabilities help ensure that business processes work end-to-end. Our solution automates across a suite of application types - from legacy on-premise to packaged and home-grown web applications, to cover everything from functional tests to QA of entire value chains.

Service and support focused on bringing business value

Leapwork's customer success team is invested in helping you identify and reach your strategic goals. Depending on your specific needs and business requirements, we also offer custom Professional Services to ensure you reach those targets even faster.

D365 tech fit for low maintenance

Most test automation solutions require you to re-record entire test cases when application UI changes occur or dive into opaque and incomprehensible XPath expressions for manual updating.

Leapwork is different. Our solution is equipped with pre-built intelligent adaptors designed to handle the complex and dynamic DOMs in D365 Finance, Sales and Business Central applications. This will enable

you to generate robust test cases at speed and keep maintenance to a minimum.

Forget about building out XPath expressions for dynamic DOM structures and editing scripts with every UI update. Leapwork does it for you under the hood. And when you do need to change something, you won't need to call a consultant.

We've got you covered

- ✓ A visual approach to regression and UI testing, end-to-end
- ✓ Easy to drive data from multiple sources and parameterize tests
- ✓ D365-specific adaptors for handling heavy and dynamic DOMs
- ✓ Works across all web, desktop, mobile and legacy applications
- ✓ Integrates with Azure DevOps, Jenkins, Jira, and more
- ✓ Visual debugging to help you identify root causes and fix issues quicker
- ✓ Reuse test case components and sequences for quick building and maintenance
- ✓ Dedicated compliance tools, including video recordings, screenshots, and audit logs
- ✓ Includes cross-technology support without requiring additional licenses

Case study

Technical debt is a silent killer of innovation. Leapwork has enabled Dan Madden, CRM Director at Ascensus, and his team to reduce bugs by 90% and increase throughput 3x.

"Thanks to Leapwork we've been able to move up the maturity scale by focusing on value creation, less technical debt, and more drivers that'll change our organization."

Dan Madden
Director of CRM at Ascensus
