Full Stack Open Source Developer - Charlotte, NC

About the Company

At Forest2Market, we believe high-quality market information improves business performance, and we are dedicated to providing that quality on a consistent basis. With transactional data, industry experience and third-party independence, Forest2Market provides participants in the global wood products, paper and bioenergy/biochemical supply chains with business solutions that support fact-based decision making and planning.

Forest2Market has experienced significant growth since establishing its roots in the Southeastern US in 2000. We now offer solutions to forest products industries throughout North America, Brazil, Scandinavia, the Baltic States and western Russia, and we are actively expanding into Chile, Uruguay and the Australasian markets.

Over the last 12 months, Forest2Market has also vertically integrated to build a group of companies that offer data-based business solutions across complementary manufacturing sectors. Fisher International offers data, analytics and business intelligence capabilities to global pulp and paper industries, and Tecnon OrbiChem offers data and analytics to the petrochemical industry focusing primarily on chemical intermediates, synthetic fibers, and resins.

Scope of Position

The successful candidate for this position will be on a team that is responsible for web development and internal process improvement. This position will report to the Director of Information Technology, will participate in IT support coverage, and may assist in other IT related projects and activities as dictated by the needs of the business.

Major Responsibilities

- As a member of a team of developers and business representatives, analyze and document existing customer facing solutions and internal business processes then design, develop, and document new efficient, scalable, web based solutions
- Assist in other IT related projects and activities as dictated by the needs of the business
- Participation in IT support coverage for the business

Skills, Abilities, and Experience Required

- Experience using scripting languages like Python and JavaScript
- Proven database design and development experience using systems like Microsoft SQL and PostgreSQL
- Experience developing and supporting applications built in the Microsoft Office suite using VBA and macros
- Proven web development experience
- Proven development experience in a data intensive environment
- Experience designing and implementing high performance, scalable solutions
- Experience writing high performance queries, stored procedures, and functions
- Experience with efficient database design
- Strong attention to detail
- Desire to learn new concepts and technologies
- Experience with international hosting and related challenges / regulations (GDPR, China, etc.)
- Experience with SAS, ArcGIS, and the forestry / wood products, paper or chemicals industry is a plus.

Education

- A degree in Computer Science or similar field is preferred
- 2+ years of relevant work experience in addition to a degree
- 5+ years of proven development experience in relevant languages and technologies may be accepted in lieu of a degree.

Compensation and Benefits

- Compensation is commensurate with experience
- Benefits package provided
