

For over 30 years, **Fisher International** has helped companies across all aspects of the global pulp and paper industry drive better performance using deep data with powerful analytics, and expert consulting. Fisher's knowledge and data-based insights are unequaled in the industry, and we find practical applications for these tools to help clients improve their decision-making and optimize their resources to drive growth.

Over the last two years, Fisher has vertically integrated to build a group of companies that offer data, analytics, and business intelligence solutions across complementary manufacturing sectors. Forest2Market offers market pricing data, analytics, and related consulting engagements to participants in the global wood products, paper, and bioenergy/biochemical supply chains, and Tecnon OrbiChem offers data analytics to the petrochemical industry focusing primarily on chemical intermediates, synthetic fibers and resins.

Fisher is searching for a Researcher with knowledge and experience within the pulp, paper and paper converting market to assist in the development and maintenance of vital business data and information. The Researcher will be responsible for acquiring and maintaining detailed information on pulp & paper and paper converting sites, maintaining, and improving data quality, and ensuring accurate, reliable, and repeatable reporting and decision support for Fisher's customers.
