DATA + DEPLOYMENT

BUILD AN AHP MODEL TO HELP YOU PICK YOUR DREAM HOME

APPROACH FOR OUR MODEL

Dan Dures, VP Customer Success at TransparentChoice

Picking a new home is a complex decision that calls on us to balance multiple data points, collaborate with our family to compare our 'gut feelings' and ultimately to come to a timely decision.

It's also a classic 'one-way' decision with the costs of a move meaning you'll be living with this decision for years to come… so let's explore how AHP could help make this into a rational well made decision.

Collaborative Decision Making E-Book

THE KEY TO A BRILLIANT MODEL - 5 STEP PLAN

1. **Define what matters to you**
   Create & Weight Criteria that capture what you look for in buying a home, focusing on what matters to you (and not the person selling). Use our Excel Template to help structure your thoughts

2. **Build a decision making process**
   How will you get from long list to short list? Define the steps, and the data you need to complete each step as you create your decision process.

3. **Define your data map**
   At the core of any decision is data. Map out what is required for the model and where it comes from.
   Use our Excel Template to help capture requirements

4. **Collect data**
   Combine hard data, opinion surveys and input made with custom Forms to populate your AHP model and generate a Ranking

5. **Complete your review**
   Add in contextual data for a final review, putting leading options into a simple Report to enable you see metrics side by side.

Want to apply this approach to a real life challenge in your organisation?
