

Matrak Progress Tracker

Get time back on your side

OVERVIEW

Put away your markers because Matrak is here for all of your wallchart and on-site progress management needs.

Matrak's Progress Tracker is a visual representation of the work sequences completed by trades on a construction project.

It's a digital rendering of the physical wallchart seen on-site and is updated in real-time to show actual progress.

This creates optimal visibility for site project managers, helping them determine if projects are progressing on time and on budget.

Subcontractors are also able to see how their trade is tracking in relation to others.

"I was looking for a tool that could support me in keeping track of progress and issues on site. Working closely with Matrak, we were able to develop a solution that has saved us time and provided the trades clarity of task due dates from their own mobile devices"

Adrian Altobelli
Project Manager

KEY BENEFITS

1

Make every minute count

Real-time progress updates provide you with accurate scheduling information 24/7. Digital progress tracking keeps everyone updated.

2

Optimise & manage field productivity

Deliver more successful projects with in-depth data, and optimise collaboration between head office and on-site subcontractors.

3

Automated data capturing

Stay connected with accurate live updates from the field to office, preventing miscommunication and manual follow-ups.

4

Single source of truth

A single source of truth means your team can provide evidence of work completed for accurate progress claims.

5

Plan better, reduce risk

Use construction sequences to resolve issues before they cost you extra time and money.

6

Protect your budget

Reduce risks, delays and reworks with real-time visual progress updates that help you identify issues early.

7

Critical Insights

Have data right at your fingertips. Access and analyse high quality field data at any time to deliver projects more efficiently.

How it works

Real-time reflection

As your team makes updates to material and task statuses in the system, Matrak's digital wallchart automatically updates the status in the corresponding area.

Subbie updates

Each room, apartment, or space has associated card views. Subbies can update the installation progress based on a trade sequence of work.

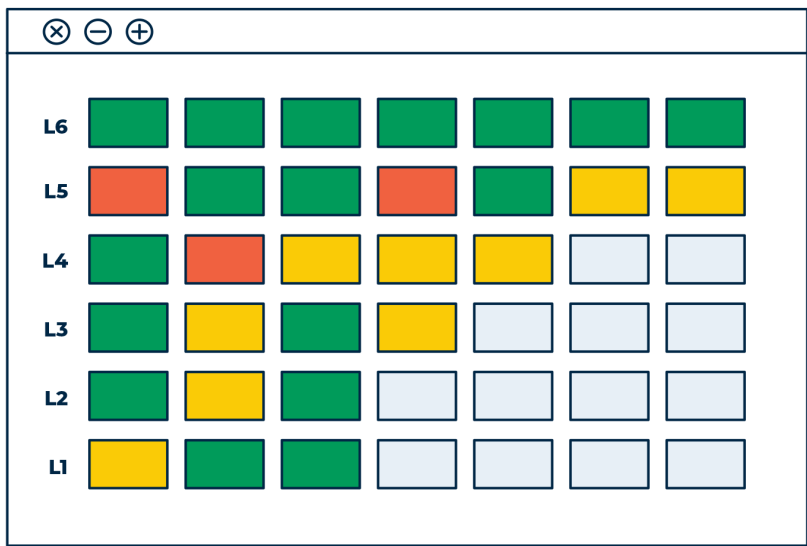

Progress visibility

Optimal visibility allows site project managers to see if projects are progressing on time and on budget.

About Matrak

Matrak offers end-to-end supply chain visibility for manufacturing, construction and building teams. A global construction tracking network, Matrak was designed specifically to simplify the complexities of moving and tracking material status, from manufacture to install and anywhere in between.

Matrak allows you to track complex material interactions and manage operations from a single source of truth, offering a global digital network that helps create collaboration and connection in construction. Find out more at www.matrak.com.
