

Hi, this email has been sent from your email account, check the From: field!

Your computer was infected with my malware, RAT (Remote Administration Tool), your browser wasn't updated / patched, in such case it's enough to just visit some website where my iframe is placed to get automatically infected, if you want to find out more - Google: "Drive-by exploit".

My malware gave me full access and control over your computer, meaning, I got access to all your accounts, that's how this email has been sent, it was possible to see everything on your screen, turn on your camera or microphone and you wouldn't even notice about it.

I collected all your private data and I RECORDED YOU (through your webcam) SATISFYING YOURSELF!

After that I removed my malware to not leave any traces.

I can send the video to all your contacts, post it on social network, publish it on the whole web, including the darknet, where the sick people are, I can publish all I found on your computer everywhere!

Only you can prevent me from doing this and only I can help you out in this situation.

Transfer exactly 1200\$ with the cryptocurrency DASH (DSH) to my DASH (DSH) address.

It's a very good offer, compared to all that horrible shit that will happen if I publish everything!

Buy DASH (DSH) here: www.cex.io , www.binance.com , www.bitpanda.com , or Google for other exchanger.

Send the DASH (DSH) directly to my address, or download and install your hardware wallet EXODUS first from: www.exodus.io , or create your online wallet first here: www.cryptonator.com , www.freewallet.org and then send to mine.

My DASH (DSH) address is: XjpNCkdGBSS93Hh5tf5xHZ85ZGBN7AQdnA

Copy and paste my address, it's (cAsE-sEnSEtiVE).

I give you 2 days to transfer the DASH (DSH).

As I got access to this email account, I will know if this email has already been read.

If you get this email multiple times, it's to make sure you read it and after payment you can ignore it!
After receiving the payment, I will remove everything and you can live your life in peace like before.

Next time update your browser before browsing the web!
