

New ScriptRunner eBook „PowerShell Security Guide“: Best practice guide for the safe use of PowerShell

Ettlingen, September 18, 2020: The authors Michael Pietroforte and Wolfgang Sommergut help the readers of the PowerShell Security Guide to recognize attacks and protect themselves effectively. ScriptRunner is pleased to make this eBook, as ScriptRunner Edition, available for free. Together with WindowsPro we inform you about the security potential of PowerShell.

PowerShell is a versatile tool for automation, configuration and system management. But in the wrong hands, PowerShell can cause great damage. Even users with only basic knowledge can use PowerShell or hacking tools to penetrate systems and gain unnoticed access to data.

What are the ways to protect yourself? Windows PowerShell itself has several protection mechanisms to fend off attacks and track suspicious activity. The PowerShell Security Guide is a compilation of tools, security features and best practices.

Together with the authors Wolfgang Sommergut and Micheal Pietroforte, ScriptRunner publishes a digital handbook on security. Wolfgang Sommergut is the operator of the website WindowsPro (www.windowpro.de) and has many years of experience as a technical author and consultant in the world of IT. Michael Pietroforte on his part operates the website 4sysops (www.4sysops.com) for IT experts. He himself has over 30 years of experience and has been awarded several times as Microsoft MVP.

There is also an exclusive chapter in the ScriptRunner edition. Written by ScriptRunner product expert Heiko Brenn, it shows how ScriptRunner can further increase the security level.

All best practices and recommendations collected in one book: „PowerShell Security“ is a comprehensive guide for IT and security professionals. Protect yourself and your system and detect attacks and unwanted activities early.

ScriptRunner provides the PowerShell Security Guide in the ScriptRunner Edition as an eBook for free (bit.ly/powershellsecurityguide).

Further information about ScriptRunner® can be found at www.scriptrunner.com

ABOUT THE SCRIPTRUNNER SOFTWARE GMBH:

ScriptRunner is the #1 platform for IT infrastructure management with PowerShell. Centralizing, standardizing, automating, delegating, monitoring and controlling routine tasks frees up resources in IT operations. Ad-ministrators and DevOps teams can use and customize included script libraries or develop their own scripts. ScriptRunner allows you to securely delegate administrative tasks to users without PowerShell knowledge or appropriate rights.

ScriptRunner is used worldwide by IT teams of all sizes and industries.

Since 2019 ScriptRunner Software GmbH is an independent subsidiary of AppSphere AG

ABOUT WINDOWSPRO:

WindowsPro is an independent online publication for all those who plan, set up or maintain IT systems on a professional basis. It focuses on desktop and server management, virtualization and cloud computing. WindowsPro focuses on benefit-oriented articles that either help solving practical problems or describe and analyze market and technology trends.
