

Krames patient education + care plans in one solution

Unlocking clinical workflow efficiency and care pathway uniformity via seamless integration

On average, nurses and doctors spend

 **50%**

of their workday treating screens—not patients—facing an ever-growing administrative burden that can lead to exhaustion.¹

Maximizing clinical workflow efficiency and care consistency requires streamlined integrations and intuitive user experiences that remove extra applications, toggling between screens, and time spent searching for relevant information.

Now, Krames evidence-based patient education is seamlessly integrated with Best in KLAS care plans from Zynx Health. This unified solution places personalized patient education mapped directly to more than 3,000 teaching points, so clinicians can consistently educate and activate patients in their health in one step. Your organization benefits from:

Clinician ease of access to education mapped to teaching points

This integration makes Krames award-winning, clinically-validated education accessible from within the individual care plan, taking the guesswork out of knowing which patient education resources are appropriate for conditions, creating uniformity and a best practice.

It's automatically recorded in the patient's medical record, with less documentation required from the clinician for simplified workflows—increasing both clinician engagement and use of patient education and care plans. Relevant education is available in Epic MyChart, including Bedside and Mobile.

Aligned care plans for increased patient activation and care quality

Delivering education that's pertinent to the patient's health improves the patient's understanding of their condition, treatment, and care plan—activating them in their health for better care quality.

A patient who has undergone a hip replacement, for example, might log in to MyChart Bedside while still in the hospital and receive Krames starter care plan patient education on using a walker, managing pain, and doing exercises. There's an opportunity for the clinician to review with and educate the patient in person and, following discharge, provide additional resources via MyChart to continue to further support recovery at home.

Standardized care across your health system

Care models are simplified, increasing care quality and reducing errors. As consistent care is delivered throughout your organization, you'll see improved patient experience, satisfaction, and quality scores.

From discovery to recovery, Krames is here to activate health with empowering content, engaging education and marketing, and intelligent, integrated clinical workflow solutions. Visit krames.com to learn more.
