

THE BEST FROM EVERY HARVEST

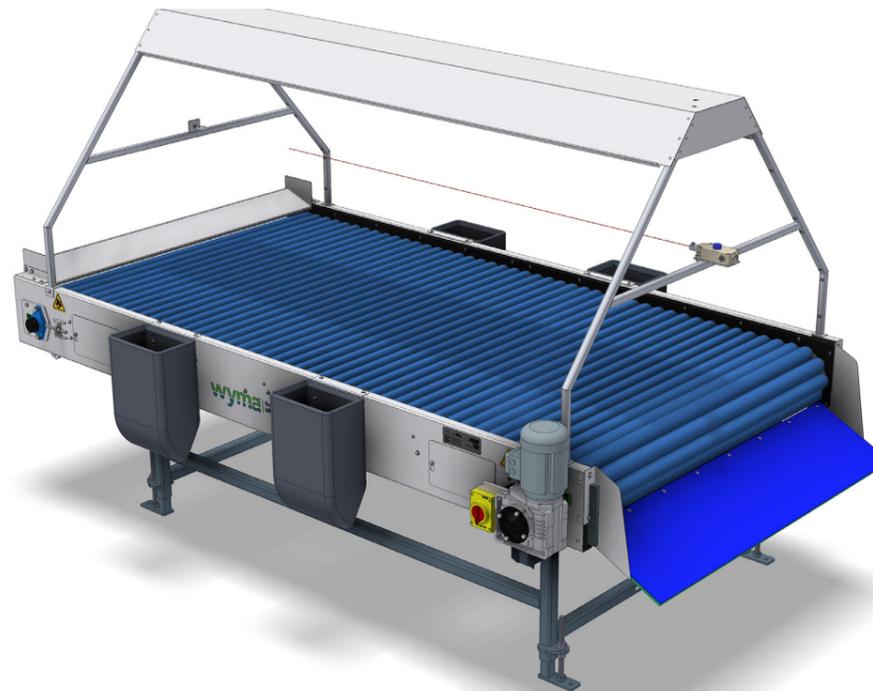

Inspecting

Roller Inspection Table

Wyma's Roller Inspection Table is for manually inspecting produce. Multiple sizes are available.

Potatoes • Carrots • Onions • Parsnips • Capsicum • Beetroot • Citrus fruit and more

Our Roller Inspection Table conveys produce for manual and visual inspection.

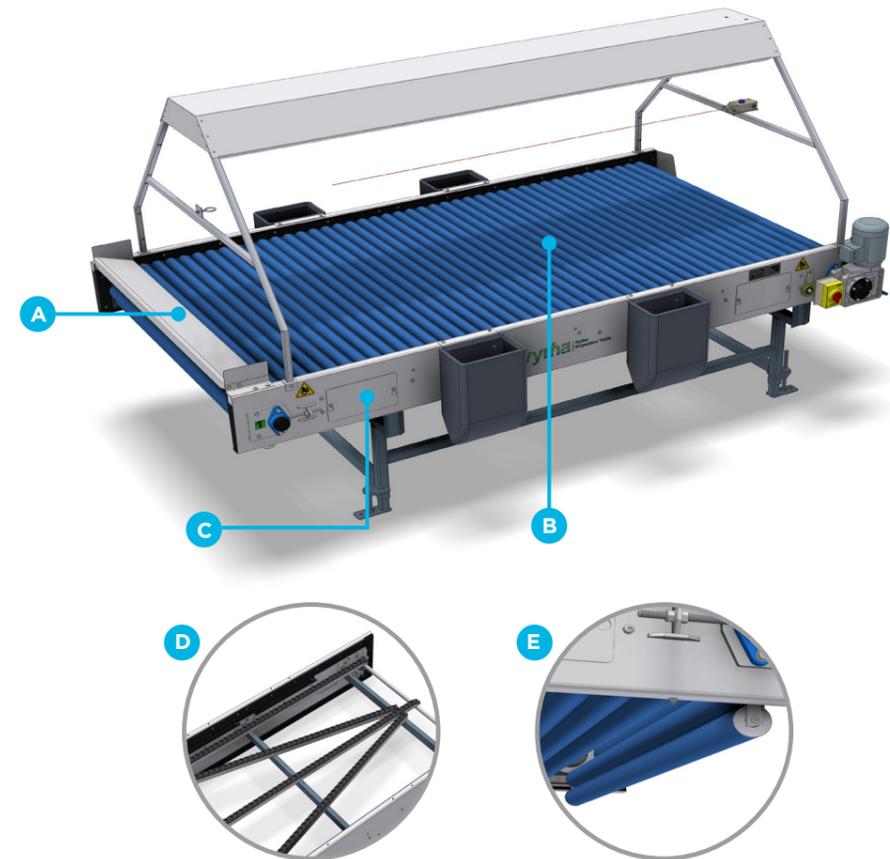

It has blue rollers for better contrast against produce. The rollers run on a heavy duty chain around a bed with rubber strips on the top edge. As the chain moves, friction between the rollers and the rubber strips makes the rollers rotate on the surface of the table. The rotating rollers make produce rotate as it passes across the table so it is easier to inspect.

The unique drop-out roller allows debris to exit from the interior of the roller bed structure.

There are waste sorting chutes along one or both sides of the conveyor. Conveyors can be provided to carry away waste and graded produce. A centre divider can be fitted to separate produce into two inspection areas.

Multiple sizes are available to suit your specific needs.

Features and benefits

- A Stainless side foldings extend beside rollers
- B Blue PVC rollers
- C Inspection hatches
- D Traction rails
- E Drop-out roller system
- Central divider*
- Variable speed drive*
- X-lube oil impregnated roller bushes
- Heavy duty extended pin conveyor chain

- Clean, safe edge with no catch points
- Improved colour contrast when inspecting or grading
- Easy maintenance and cleaning access
- Keeps all rollers rotating together
- Allows dirt and/or debris to fall beneath the table, minimising build-up inside the table
- Creates central lane for waste sorting
- Easy speed adjustment
- Accommodates both wet and dry produce
- Durable and hard-wearing
