

PR-10,000

Phosphate Remover Concentrate

- Breaks down and digests non-living organic waste, oils, lotions and sunscreen
- Helps keep tile lines and filters clean
- Increases water clarity and ORP
- NSF/ANSI Standard 50 Certified, non-toxic, non-hazardous

PR-10,000 is known in the pool industry for its strength and concentration. It reacts with phosphates immediately on contact, and flocs them out of solution to be vacuumed or filtered out of the pool.

PR-10,000 is an NSF/ANSI 50 Certified phosphate remover designed for water with the most challenging phosphate issues. It is a rare-earth mineral formula, 100% mined and blended in the USA.

PR-10,000 is powerful enough that it may only need to be used once a year. The formula will never be watered down, and the product's effectiveness speaks for itself.

***DOSING INSTRUCTIONS**

*Use only as needed. Test for phosphate levels before applying PR-10,000 to the pool. Follow the dosing table on the bottle, and **do not exceed eight (8) ounces per 10,000 gallons in one application.***

Water will cloud when reacting to phosphates. Allow 12-24 hours for clouding to clear, then vacuum to waste, and clean the filters.

Repeat process if first dose did not lower phosphate levels enough. Always measure before pouring.
