

CASE STUDY

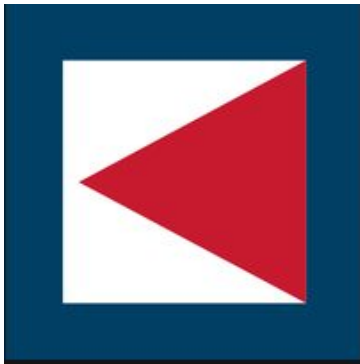

Procore + JDE Integration for Kitchell

ABOUT KITCHELL

Founded in 1950, Kitchell Corporation is a privately held, employee-owned general contracting, construction management and real estate development company with over US\$354M in annual revenues. Kitchell is headquartered in Phoenix, AZ, has additional offices throughout California and is licensed in 13 states. The company applies innovative approaches to quality assurance, safety, value engineering, environmental protection and other industry-leading practices to a wide range of construction and program management projects in the hospitality, healthcare, corrections, utility, renewable energy, retail, performing arts and academic markets

ABOUT CALANCE

Calance is a global IT Services firm operating in the United States, Canada and India. Calance provides simple scalable integrations between Project Controls and Financial systems for construction and other asset-intensive industries. With a long history of success, Calance is dedicated to improving project efficiency.

CHALLENGE

Kitchell is one of the top construction firms in the United States, and recognized as a thought-leader in construction technology and innovation. After 70 years of business, they fully understand the need to embrace modern solutions across their entire business and continually keep on the cutting edge of the construction industry.

The adoption of Procore as Kitchell's new project management solution quickly necessitated replacing the prior financial integrations they had between Prolog and JDE. The previous client-server based middleware was costly, on-premise, and represented prohibitive development expense. Additionally, alternative products couldn't satisfy Kitchell's unique business processes.

SOLUTION

Kitchell found that Calance's Dimension SaaS offering provided the flexibility and stability they needed to rapidly move to Procore and yet retain the integration with JDE. Dimension enables a suite of integrations to run on the cloud following a set of standard workflows which can be configured and customized as needed. Kitchell chose to integrate the following modules:

- Vendors
- Projects
- Budgets & Modifications
- Cost Codes
- Insurance Logs
- Commitments & Changes
- Commitment Invoices
- Check Payments
- Direct Cost Invoices
- Miscellaneous Job Costs

After meeting with the Calance Team, it was apparent Kitchell could leverage the existing Dimension modules to satisfy most requirements. Functionality gaps were resolved through agile collaborative engagements. Once core requirements were complete, additional capabilities were deployed and continue to be enhanced. The phased approach was completed with only two employees in a non-dedicated capacity. This dramatically reduced the load on technical and operational resources that would have been required with other solutions. Calance's Procore and JDE experts also worked closely with Kitchell's team to resolve any issues that legacy data presented.

RESULTS

Kitchell saw immediate benefits from this integration. Moving onto a reliable integration platform has helped ensure confidence in the integrity of the data in Procore and JDE. Without the distraction of integration issues like with their previous system, project managers are now able to focus on what they do best without being tied down by any bulky technical processes. The flexibility of the Dimension platform continues to adapt to Kitchell's evolving business needs.

“Dimension requires minimal support, and synchronizes millions of rows of data on a continual basis. With other integration solutions in the past, we had experienced perpetual integration issues. Now, there are virtually none.”

- Jason Koppert, IT Applications Manager
