TS-90 - 90° Angle BBOE

Radiator Type	Tolerance
11	85mm
12	90mm
22	100mm

As standard we allow a 100mm tolerance from cover to underside of radiator. Please check if this enough tolerance and advise.

Any drain off valves installed must be within the length and depth of the radiator.

Internal TRV not recommended due to sensor being inside the cover at the top which may cause it to shut off early

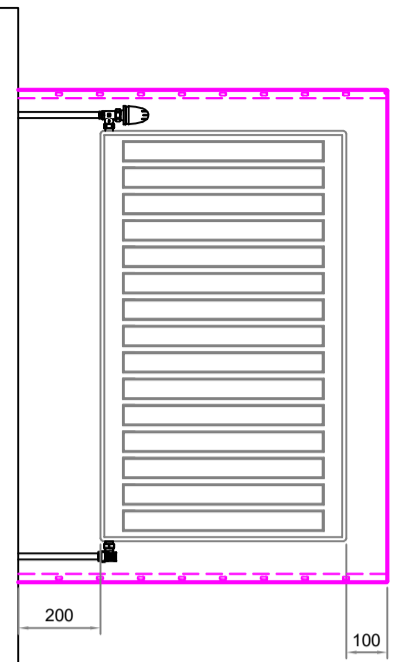

Height tolerance for sloping top varies depending on radiator type being covered. Refer to the table for tolerance required

*Cover preferred to be 100mm of the floor to allow for easy cleaning access.

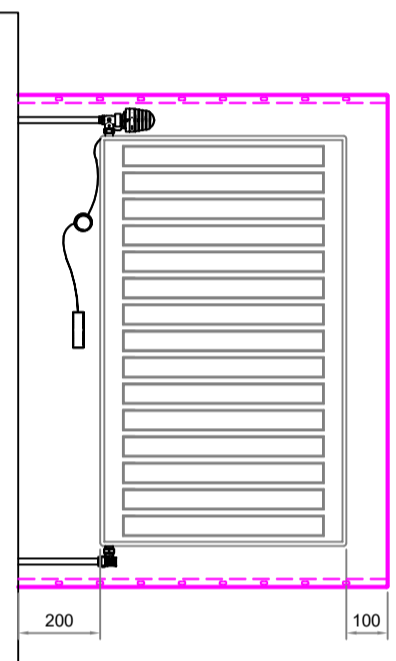

All valves are suitable for 1/2" steel pipes. All kits come complete with a nut and olive to accept 15mm BSP copper.

* All dimensions in mm.
* Drawings not to scale.

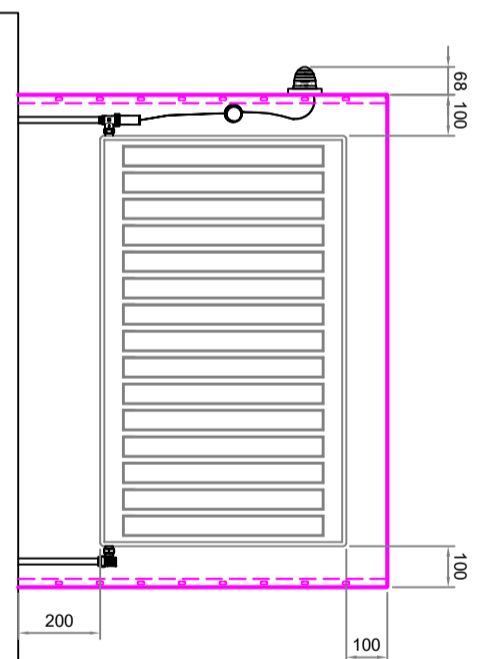

Valve Options

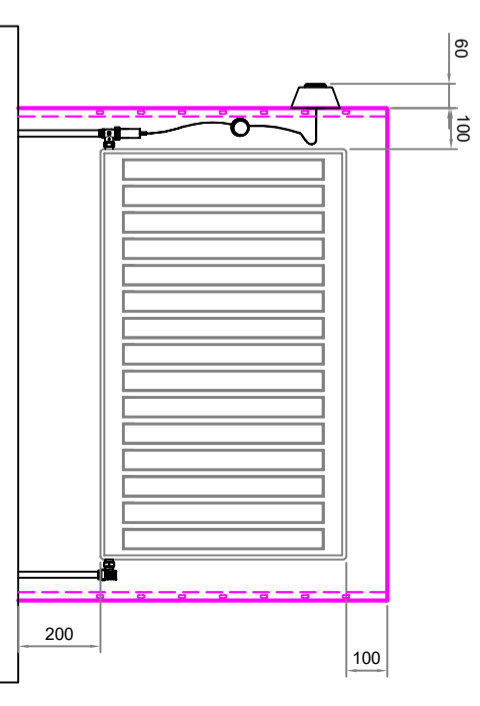

Internal
Code: 9210-13

Remote Sensing
Code: 7463-41

External
Code: 9330-41

Anti Ligature
Code: 1935241
