

DeepClean radiator guards

Hospital In The North West

CASE STUDY

SUMMARY:

The installation of 92 linear metres of DeepClean radiator covers

BEFORE

AFTER

The radiators were in a busy corridor. Due to the placement, they were being damaged on a regular basis. As a result of frequent damage over time, the previous covers dangerous with sharp edges on display.

For cleanliness, the DeepClean radiator cover was installed. The DeepClean LST radiator guard is constructed using a patented, quick release hinged door. This allows the front of the casing to be laid flat to the floor and provides an operative easy access to clean the radiator.

RESULTS

The existing design of perimeter heating followed the contours of the walls so this meant utilising the modular design that the Deepclean radiator cover offers.

Contour made sure that the hazards from the previous radiators were removed, ensured the grilles were pencil-proof and access to clean inside them was easy to help keep bacteria levels down within the hospital.

The range is supported by a comprehensive service package comprising of free site consultations, a bespoke design facility, dedicated technical and delivery departments, short lead times and an approved installation service.

For comprehensive information on Contour's LST radiator and guard range, or to arrange a free site survey, call 01952 290 498, or email sales@contourheating.co.uk
