

1

**Activate your kit online at [color.com/covid/activate](https://color.com/covid/activate).**

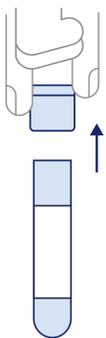

You will need your unique barcode, which you'll find on your collection tube.

If you did not reach the confirmation page or get an email / text confirmation, your kit is not activated!

**WARNING:** Your sample will not be tested if the kit is not activated.

2

**Before collecting your sample, use hand sanitizer to clean your hands thoroughly.**

3

**Remove the cap of the collection tube.**

Keep the cap and collection tube nearby.

4

**Open the package with the swab.**

Starting from the handle end of the swab package, peel open the paper backing. Pull swab out of its packaging by the handle.

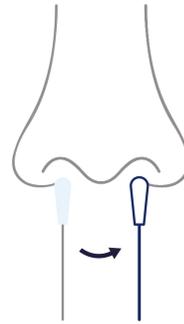

**Note:** Do not touch the soft tip with your hands or lay it down on any surface.

5

**Rotate swab tip in first nostril, 4 times.**

Insert the soft tip into one nostril, until it is no longer visible. Using medium pressure against the inside of your nostril the whole time, rub the swab in a large circular motion at least 4 times.

**Note:** Swab should not go further than half an inch.

6

**Rotate swab tip in other nostril, 4 times.**

Repeat the previous step in the second nostril, using the same end of the swab.

**Note:** You will use the same swab for both nostrils.

7

**Put the swab into the collection tube.**

The soft tip of the swab that went into your nose should go into the tube first.

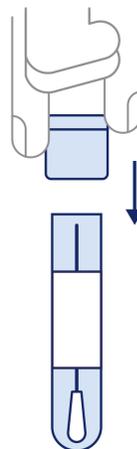

8

**Push the cap of the collection tube closed.**

You're almost done! Make sure the top is closed tightly.

**Note:** After closing the collection tube, use hand sanitizer to clean your hands thoroughly.

9

**Put the collection tube into the biohazard bag.**

Seal the bag closed.

10

**Bring the biohazard bag to your designated test collection point.**

Refer to your program details if you're not sure where to deposit your sample.
