

Why continue testing for COVID-19 in schools?

There's still a risk of virus transmission, especially among those who aren't vaccinated.

Only about **50%**

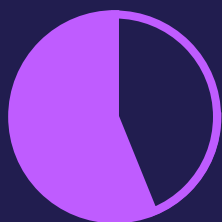

of eligible adults and children are fully vaccinated.¹

New daily infection rates in regions with low vaccination levels are over

+ 2X the rate of areas with high vaccination levels.²

Children now account for **more than a fifth** of new coronavirus cases.³

40% of children with COVID-19 do not have symptoms.⁴

The Delta variant is **2X more transmissible** than the original virus.⁵

Protect your students, staff and community
