# In IT, prevention is not only the best but also vital strategy.

## 4IT Solutions / Proactive Monitoring Services:

The professional services of 4IT Solutions help IT departments in companies of all sizes to accelerate implementation time, reduce related risks and maximize return on investment.

4IT Solutions offers qualified and certified staff with proven experience in providing appropriate advice and developing the necessary integration processes for the adoption of the required solution.
Our consultants have experience not only in the field of virtualization and can thus help our numerous customers in many IT fields, through tested and certified methodologies.

### See what customers are saying:

*"Our core business is to offer a new concept of wired & wireless connectivity-inclusive annual rental of furnished, air-conditioned apartments and accommodations. This offer, ideal for professionals looking for modern housing, students, retirees and couples, would not be effective without a suitable network-connectivity availability and performance monitoring system.*

*In this context, even more due to the ongoing pandemic inducing a "workplace" concept paradigmatic shift in moving the operativity from institutional headquarters towards homes, we opted for 4IT Solutions Proactive Monitoring."*

*– Andrea Garzoni - Investment Manager & Member of Executive Board, Garzoni SA*

## WHAT WE OFFER

Proactive monitoring allows you to structure, in an initial activation phase, a series of basic logical controls that allow our System Engineers and you to control each predefined component through dynamic and historicizable graphs.
This will allow you to solve most of the anomalies even before they can create disservices to users or can be perceived generating a degradation of infrastructure performance.
We offer you the proactive monitoring managed service, to save time in control operations and to concentrate internal resources in core business activities, at the cost of a fixed monthly quota.
All activities carried out during the assessment will be non-intrusive, thus guaranteeing the constant operation of the customer.

Our service is provided by relying on a VM on Azure, in Microsoft's datacenters. There is also a network security group to filter network traffic to and from this Azure resources.

# Why Microsoft Azure?

## Be future-ready

Continuous innovation from Microsoft supports your development today, and your product visions for tomorrow. With 1,000+ new capabilities in the past year, you can build on the latest advancements in AI, blockchain, Kubernetes, containers, and databases to keep you ahead of the curve.

Our enterprise grade analytics solution outperforms the competition, costs less, and is fully compatible with your existing development, BI, and data-science tools.

## Operate hybrid seamlessly

On-premises, in the cloud, and at the edge—we'll meet you where you are. Integrate and manage your environments with tools and services designed for hybrid cloud.

Enhance security, simplify access, and set smart policies across your different environments with a single-identity platform trusted by 90% of enterprises globally.

## Build on your terms

You have choices. With a commitment to open source and support for all languages and frameworks, build and deploy how you want to. Take advantage of the full-featured, integrated development environments with built-in support Visual Studio and Visual Studio Code, the most popular IDEs trusted by 15M+ developers.

We embrace open source, drive innovation through collaboration, and contribute back to the community.

## Trust your cloud

Get security from the ground up, backed by a team of experts, and proactive compliance trusted by enterprises, governments, and startups.

With a $1B+ investment in security R&D and 3,500 cybersecurity experts, security is foundational for Azure.

**Microsoft Azure**

Microsoft Azure is an ever-expanding set of cloud computing services to help your organization meet its business challenges. With Azure, your business or organization has the freedom to build, manage, and deploy applications on a massive, global network using your preferred tools and frameworks.
