

A better way to manage open source

Keep your open source software supply chain safe and up to date with help from Tidelift and our open source maintainer partners.

MOVE FAST, STAY SAFE

The Tidelift Subscription gives application development teams everything they need to accelerate development, cut costs, and reduce risk when using open source.

TOOLS

We provide the tools to create, track, and manage catalogs of open source components and the policies that govern them.

MANAGEMENT

Get help building a paved path for your organization's developers with useful and actionable data and recommendations.

MAINTAINERS

We partner with a large and fast-growing network of open source maintainers, and pay them to keep their code secure and up to date.

TIDELIFT

Standardize on a trusted set of known-good, issue-free packages and versions—across the organization

With the Tidelift Subscription in place, stakeholders across the organization will see the benefits of a managed open source approach.

MANAGER

Accelerate development and stay safe

Build with safe, approved, and compliant packages from the start to speed up development and reduce technical debt.

INFOSEC

Reduce open source security risk

Get a single place to define, review, and enforce policies around security vulnerabilities in open source components.

LEGAL

Reduce open source legal risk

Get a single place to define, review, and enforce license policies and get indemnification to protect against licensing-related risk.

DEVELOPER

Move fast and avoid rework

Eliminate late-breaking surprises that slow down development by using pre-approved, known-good open source components.

Get a free open source software bill of materials

Try the Tidelift Subscription for 14 days—for free
