

Quinclorac 75 DF

Post-Emergent Herbicide

Quinclorac 75 DF is a water-soluble selective post-emergent herbicide that kills broadleaf weeds and grasses in tolerant turf species. The weed foliage and roots absorb the Quinclorac 75 DF and translocate it throughout the weed. Treated weeds will begin a process called chlorosis where the weed will curl up and changes colors and then die.

Active Ingredient

75% Quinclorac

Effective Against

Crabgrass, Clover, Foxtail, Dandelion, Black Medic, English Daisy, Morningglory, Dollarweed, Speedwell, Torpedograss, Kikuyugrass, Barnyardgrass, Bindweed, Signalgrass, Violet

Use Sites

Commercial & Residential Turfgrass, Golf Courses, Sports Fields and Sod Farms

Packaging

6 x 1 lb (30 cases/pallet)

Mode of Action

Absorbed by roots and foliage, active ingredient translocates to interfere with plant growth and cellulose production, which quickly causes plants to die

Features & Benefits

- Long-lasting control of weeds and grasses - from one month up to 90 days
- Excellent control of crabgrass, even in its mature stages
- Application and seeding flexibility - ideal for seeding and overseeding before or after application
