

INSECTICIDE

COMING  
SOON

# SUPRADO

It's time to wreck the weevil! Introducing Quali-Pro's Suprado Insecticide, powered by Novaluron. A brand-new class of chemistry with a unique mode of action to fight against annual bluegrass weevils.

## Advantages of using Suprado

- **New Chemistry:** Suprado's active ingredient, Novaluron, is available for use in turf for the first time. This introduces a new mode of action (IRAC Group 15) to the market as a valuable rotation option in the fight against insecticide resistance.
- **Application Flexibility:** Suprado is proven to prevent damaging ABW larval stages when applied at adult peak migration, small larvae, and medium larvae timings.
- **Unmatched Efficacy:** Suprado provides superior control of damaging ABW larvae, even on insecticide-resistant populations. No other solution offers this level of control.

## How it Works

Novaluron is a chitin synthesis inhibitor (CSI). This active ingredient interferes with the ability of the insect to produce chitin, the primary component of insect exoskeletons, resulting in abortive molts.

“We observed excellent control with the label rates whether the applications were made against adults, early instar larvae in the plant or older larvae in the soil”

-BEN MCGRAW, PH.D.
