

Advisory Board Member Introduction: Alex Agut

Qualitative AI product designer, Bitcoin SV developer, CEO of Bitcoin SV wallet HandCash & Bitcoin Association Ambassador for Spain

At present, Alex Agut is best known for the Bitcoin SV wallet, HandCash. Alex's pre-Bitcoin career, however, is just as impressive.

Agut, and HandCash co-founder Rafa Jimenez, became acquainted while working together at Accenture, on quantitative AI solutions that would find their way into Tesla cars and working on projects like developing autonomous driving applications for BMW.

When the pair founded their first start-up, a sharing-economy app called *Jobbie*, they came face-to-face with the difficulties of integrating Bitcoin micropayments into their app. The challenge led them to become pioneers in developing the tool sets required to solve this.

Alex's experience with *Jobbie* taught him invaluable lessons around UI and improving retention and engagement rates, and Alex attributes their success with HandCash in part to these learnings. One of the lasting lessons was the perspective he developed on the potential of Bitcoin within the quickly-growing app economy: When it comes to micropayments, no payment rail can compete with Bitcoin.

With a background of qualitative AI product design, and a Bitcoin SV wallet that continues to push the bounds of innovation under his belt, Alex's experience makes him a valuable addition to the Bitstocks Board.
