**“ Somewhere,
something incredible
is waiting to be
known ”**
– Carl Sagan

Responsibilities

As an Associate Systems Developer, I aid in the selection and development of systems to support IMEC internally. I have enjoyed a lifelong interest in electronics and possess a strong drive to produce solutions that are verifiable, maintainable, and ultimately extendable as organizational needs shift.

At IMEC, I have developed a particular focus on working with data, applying information from my education and experiences to create robust systems that handle data for transactional and reporting purposes. I am responsible for identifying processes that can be improved or streamlined through application of computer automation.

Qualifications

- Bachelor of Science in Computer Science, French from Bradley University
