INCREASE EFFICIENCY

Looking for some extra time to complete your daily tasks? Our data management tools allow you to complete reporting and process control tasks in minutes instead of hours.

SHARE KNOWLEDGE

Simplify sampling compliance with a calendar in a central database. Use our data management tools to easily generate and share reports with your team, management, board, and government agencies.

IMPROVE PROCESSES

Say goodbye to your clipboards and pens. Capture your daily readings in the field on a smartphone or tablet and forget about transposing your data into a spreadsheet later.

ELIMINATE PAPER

No need to dig through filing cabinets looking for past records. Gain immediate access to all of your chemical, meter, precipitation, and sample data within a central database.

PRODUCT FEATURES

Automated Monitoring Schedule

The SEMS water quality system displays your state's water quality monitoring schedule with the needed sample data required to meet compliance.

Mobile Benchsheet

Reduce repetitive data entry and improve data accuracy with one-time mobile collection of all your daily readings.

SCADA Connect

Automate the import of SCADA or Historian data, providing immediate access to daily meter and instrumentation readings.

Lab Connect

The SEMS database automatically imports lab results from your contract or EDD/EDT files.

Data Management

SEMS provides a centralized location to store all your sample, meter, chemical, and precipitation data. You can filter that data by location, parameters, or date range for advanced report creation.

Reporting: State and Internal

Automate your monthly reports (DMR and/or EDMR) from data in the system for state or internal purposes.

Analytics

Create top-notch, custom reports using our reporting engine paired with Excel pivot tables. Data is pulled directly from the SEMS database so it can easily be refreshed and kept up-to-date.
