Save time through faster, more intuitive editing.

Most clinicians spend too much time documenting patient visits, and wish the experience was more tightly integrated within their overall workflow.

This visit documentation redesign aims to simplify and streamline the documentation experience by reducing clicks and improving navigation, thus allowing clinicians to do more from within their visit note.

- Larger radio buttons and sidebar navigation simplify note editing
- Single-scroll navigation and in-line editing reduce the number of clicks
- Auto-save functionality removes the need to manually save every edit
- Sign-off password is no longer required
- Sign off on visit charges directly within the visit note, without leaving the page
