

# INFORMATION SECURITY AT WORKPATH

## HOW WE KEEP YOUR DATA SAFE

### 1 Which certifications verify the security of the Workpath platform?

Workpath is certified according to ISO 27001. The certificate can be downloaded [here](#).

The Workpath platform is hosted at AWS which is certified in many different ways, including ISO 27001, TISAX and SOC II. For more information, check [here](#).

Backups are secured at Hetzner who is ISO 27001 certified. For more information, click [here](#).

### 2 How is the security of the Workpath platform ensured?

Our infrastructure, web applications and APIs are governed by code reviews, security scans and annual penetration tests by external independent parties to ensure the security of our platform.

### 3 Is the data in the Workpath platform encrypted?

Yes, we encrypt all data at rest, in storage and in transit. All data is encrypted with AES 256 and TLS 1.2. The Workpath platform can only be reached through HTTPS.

### 4 What are the backup cycles?

Data is backed up hourly and stored for 24 hours. Daily backups are stored for 7 days and weekly backups are kept for 4 weeks.

### 5 How are system and data changes tracked?

We have a central log management system (SIEM), where we can track activities in the platform. Infrastructure changes are committed in code and are following our secure Software Development Life Cycle.

### 6 Do you maintain an Information Security Management System (ISMS)?

Yes, we maintain a certified ISMS according to the ISO 27001 standard. The certificate can be downloaded [here](#).

### 7 Are you GDPR compliant?

Yes, we are GDPR compliant and maintain a data protection management system which closely works with the ISMS.

### 8 Contact
