### KEY FACT

Across England, most mid and high rise dwellings over 11 metres tall are **required by law** to fit both **sprinklers and wayfinding signage**.

#### WHY BLAZEMASTER CPVC:

We have developed systems using CPVC pipe and fittings, to allow for a **safe, strong & efficient installation process** that can cope with a sharp rise in demands.

### KEY FACT

Non-metallic CPVC provides several key advantages in the installation of fire sprinkler systems, including **superior hydraulics, fast, straightforward assembly** and superior corrosion resistance.

#### WHY BLAZEMASTER CPVC:

BlazeMaster's fast, efficient installation process requires **less energy** than steel solutions and its resistance to corrosion provides buildings with **longer lasting, more reliable** protection.

BlazeMaster CPVC vs Generic Steel

# BlazeMaster®

### KEY FACT

Projects across the UK are rolling out **fire sprinkler retrofits** in response to the building regulation reviews following the Grenfell Tower tragedy in 2017.

#### WHY BLAZEMASTER CPVC:

BlazeMaster CPVC is a **world leading non-metallic fire sprinkler material** due to its **fast installation process** and instant availability across the UK, thanks to our network of trusted suppliers. A permanent CPVC joint can be **made in minutes**, getting sprinklers into residences faster.
