

How to add Smartum online payment to your website or online store

1. Read more about the payment method and make sure you have a contract with Smartum.
2. Contact your website developer.
3. Test the payment method in your environment.
4. Request the venue_id for production from Smartum.
5. If preferred, add a card payment option so your customers can pay part of the purchase with a debit or credit card.

smartum!

1. Read more about the payment method

With Smartum online payment your customers can make purchases directly from your online store or website. On this website you can find all necessary information about the payment method: <https://www.smartum.fi/en/onlinepayment>.

If your company uses WiseGym, Liveto, Hellewi or Liikuttajat.fi online store platform, you can add Smartum online payment method easily by contacting the provider of the ecommerce platform. Adding the payment method to WooCommerce platform is possible by [Eeco](#) expansion. Smartum online payment will also soon be available on [Rentle](#) platform.

Make sure your company has a contract with Smartum. If you are not yet on our network, join Smartum network for free here: <https://extranet.smartum.fi/register/service>.

2. To the developer

Technical documentation

Contact your website developer to add the online payment method. Everything needed to set up the Smartum online payments can be found here: <https://developers.smartum.fi/>.

Online test store

After you have done all the steps needed you can test the implementation in practice. Use Smartum demo online store at <https://webshop.staging.smartum.fi/>

Login info:

Username: 64556@arant.io

Password: sagapo

We recommend making payments with amount of € 0,01 when testing.

3. Test payments in your environment

Once your developer has coded the integration to the online store or website, you can test the payment method in Smartum staging environment.

Information about the staging environment for testing can be found here: <https://api.staging.smartum.fi/docs/#section/Introduction>.

How to add Smartum online payment to your website or online store

1. Read more about the payment method and make sure you have a contract with Smartum.
2. Contact your website developer.
3. Test the payment method in your environment.
4. Request the venue_id for production from Smartum.
5. If preferred, add a card payment option so your customers can pay part of the purchase with a debit or credit card.

Login info:

Username: 64556@arant.io

Password: sagapo

Use a test venue that matches your industry. Test venue code depends on the industry:

Exercise --> ven_p86yX97hw74W5Njq

Culture --> ven_K041DeMhnVKDr3ae

Lunch --> ven_Je31XBbhQAWZXjpL

Massage --> ven_VeGQ5JbhA7nz5mr4

Commute --> ven_YnM15R9h8mdKljqQ

Once payments are working in the test environment, proceed to section 4.

4. Request the venue_id for production from Smartum

After setting up the online payment method to your website, request the venue_id for production from Smartum. This will open the Smartum payment interface and connect the payments to your Smartum account.

Request the venue_id by sending email to kumppanit@smartum.fi.

If your company has multiple venues and only one online store through which you can buy services, we recommend that you create a new venue for the online store. This makes the tracking of the payments easier. Create a new venue by using these [instructions](#).

5. Add a card payment option so your customer can pay part of the purchase with a debit or credit card.

Check this section if you want to offer your customers the option to pay part of the purchase with Smartum benefits and the rest with a debit or credit card.

Split payment feature is done by Stripe payment intermediation service. Find the instructions for this on the next page.

How to add Smartum online payment to your website or online store

1. Read more about the payment method and make sure you have a contract with Smartum.
2. Contact your website developer.
3. Test the payment method in your environment.
4. Request the venue_id for production from Smartum.
5. If preferred, add a card payment option so your customers can pay part of the purchase with a debit or credit card.

The split payment feature is done through the Stripe payment intermediation service. Instructions for implementation:

1. [Create a Stripe account](#) to accept payments.
2. Connect your Stripe account to your Smartum Stripe account by using the links provided below.
3. Once the service is activated, you will receive your Stripe ID for testing and production use. Save these and provide these to your developer.

Connecting accounts:

Connect Stripe test account:

<https://stripe-connect.staging.smartum.fi>

Connect Stripe production account:

<https://stripe-connect.smartum.fi>

Test the general interface in Smartum demo online store:

<https://webshop.staging.smartum.fi>

You can test payments using this username and password:

Username: 64556@arant.io

Password: sagapo

Test card number: 4242 4242 4242 4242

CVC: Any three digits

Expiry date: Any future date
