

F1000 corporation gains control of its supply base by utilizing **Tada's Supply Chain Command Center Platform**

Background

While no company (also referred to as OEM) ever anticipated a global pandemic in recent times, the current situation has presented a unique opportunity for OEMs to transform their supply chains and stop any similar risks in the future. The F1000 company needed to put a methodology, and process in place to understand the constraints of the supply base. This requires a thorough understanding of the company's supply chain to know what and where to transform.

Challenge

Demand prioritization and capacity allocation

The F1000 company was shutting down shifts in production lines across the globe due to parts unavailability from their suppliers. A collaborative approach and technology was needed to work with the suppliers across the entire network to alleviate constraints and prioritize capacity.

Solution

Take command of your supply chain

- Realtime, automated supplier collaboration
- Material availability tracking and reporting
- Issues and constraints management and visibility

Executive Summary

A F1000 company wanted to track the capacity of its suppliers. Tada's Command Center as a Service is a one-stop-shop for all the information you need and works irrespective of what the supplier provides – from iron providers in China to a customer building roads in the middle of Utah. Tada's system helped the company understand the major bottlenecks and create business scenarios to calculate the cost of various decisions. It also helped in tracking and planning human resources to support operations as well as prepare for growth plans.

Tada Benefits

- Connect key demand, supply, shipment data across supply tiers
- Manage risks between ecosystem partners
- Enable coordinated and synchronized planning

Results
