

Tada Cognitive Solutions, LLC

Software Developer

The company

Tada Cognitive Solutions is changing the way business is conducted. Our digital platform ingests information from varied data sources and synthesizes that data to create a Digital Duplicate of your business. This Digital Duplicate is a digital representation of your entire operation, allowing you to explore connections between previously siloed pieces of data. Decision makers can now immerse themselves in their business data, using it as a catalyst for digital transformation and operational change.

The position

The Software Developer position will be responsible for the design, development, documentation, and delivery of a highly available and scalable platform for our current solution stack. This person should be a team player, willing to take on a variety of challenges and work in a collaborative environment. Specifically, Tada is looking for someone who considers themselves a technologist at heart – someone who has a passion for delivering high-quality software solutions.

Seniority level: Mid-senior level executive

Employment type: Full-time

Fundamental components of the position:

- Generating clean, reusable, and well documented code
- Leading the technical design, application architecture and development of complex, cross-functional, cloud-based applications
- Build prototypes and proofs of concept to validate technical decisions
- Investigate and resolve bugs/deficiencies to optimize product
- Provide support to the platform development and UI/UX resources to develop a scalable architecture that allows for continued emerging design
- Design system specification, standards, and programming

Candidate background/experience

- 3-7 years experience in software design/development

- Strong development skills and hands-on experience developing enterprise level applications using .NET framework, C/C++, C# or equivalent languages, JSON, XML, WebAPI, Mobility, client-side framework
- Familiar with AppServers, RESTful web services, Service Bus
- Working knowledge of cloud architectures – AWS, Oracle, Azure
- Brings a “design first, coding next” mindset to development
- Experience with analytic techniques and methodologies is highly desirable
- Willingness and ability to engage with other developers and solution architects to ensure the deliverables are aligned with business needs
- Educational requirements include the following:
 - Graduate level degree in Computer Science, Information Systems, Mathematics, Statistics, Engineering or related field; OR 5 years of experience as a software engineer/architect in a product development environment
