**WHAT IS LIFE LIKE IN
URBAN AMERICA?**

**GO TO WWW.MENTI.COM
ENTER CODE **92 41 01 5****

TODAY WE WILL EXPLORE HOW TO BUILD A DATA READY CULTURE:

- 1. WHAT IS A DATA READY CULTURE?**
- 2. WHAT IS PLACE BIAS? WHERE DOES IT COME FROM? AND WHY SHOULD IT MATTER TO YOU?**
- 3. HOW CAN EXTENSION PROMOTE A MORE EQUITABLE DATA READY CULTURE?**
 - HOW CAN YOU DETECT BIAS?**
 - HOW CAN YOU CORRECT BIAS?**

ENABLING A DATA READY CULTURE

- Data are powerful, both for good and for bad
- Communities can use their own data to chart their own, unique path (CLD3)
- Place-based bias limits opportunities for many rural communities
- We need new and better ways to measure and talk about rural places to reduce place bias

- When we search for information using a web browser (e.g. Google or Firefox), the results are determined by algorithms
- Algorithms are bits of code...a program...designed to help us find what we're looking for. They are based on:
 - Prior search history
 - Search histories of people like us
- Search results reveal hidden biases, assumptions, and unchecked stereotypes about people and places

When people search for
information about rural & urban
places this is what they see

What happens when you search for countries?

- We collected the top-10 English language terms about every country of the world
- We collected these data as though the searches were coming from each country, about every country

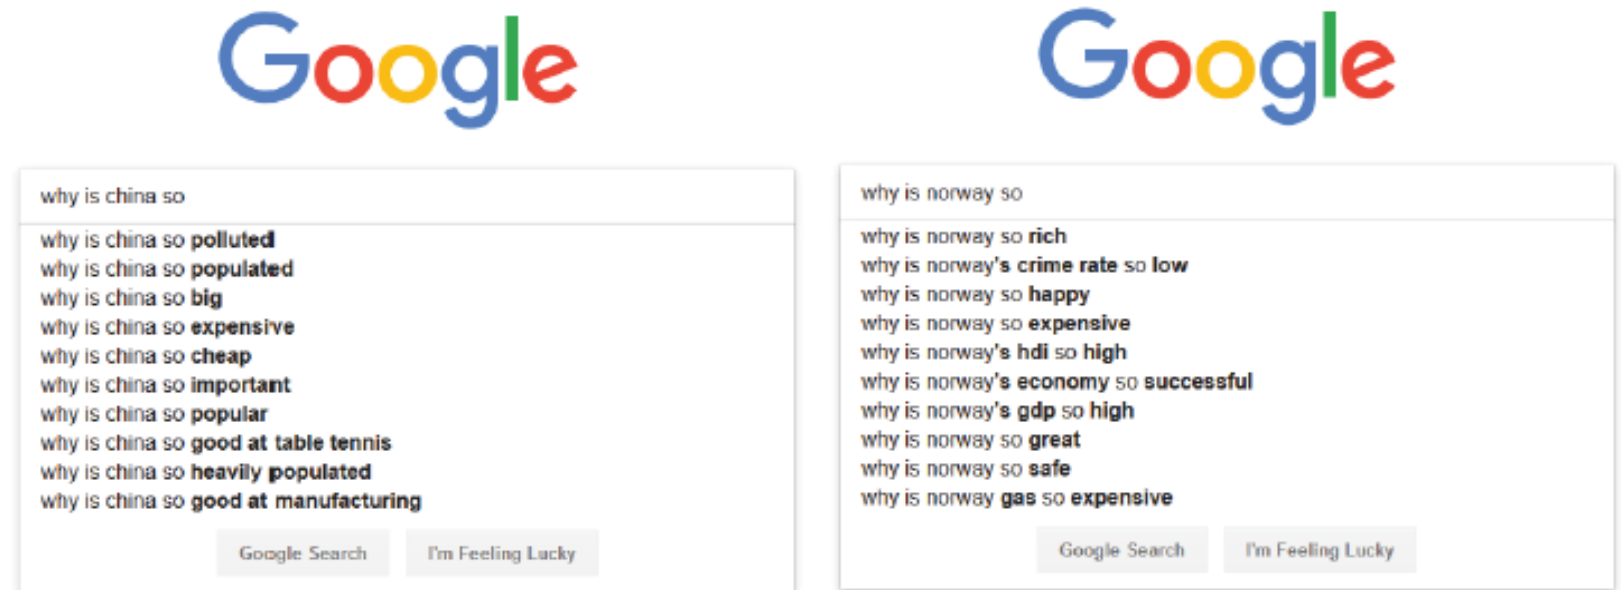

FIGURE 1. Measuring national and developmental perceptions in Google search data

A Developmental Worldview

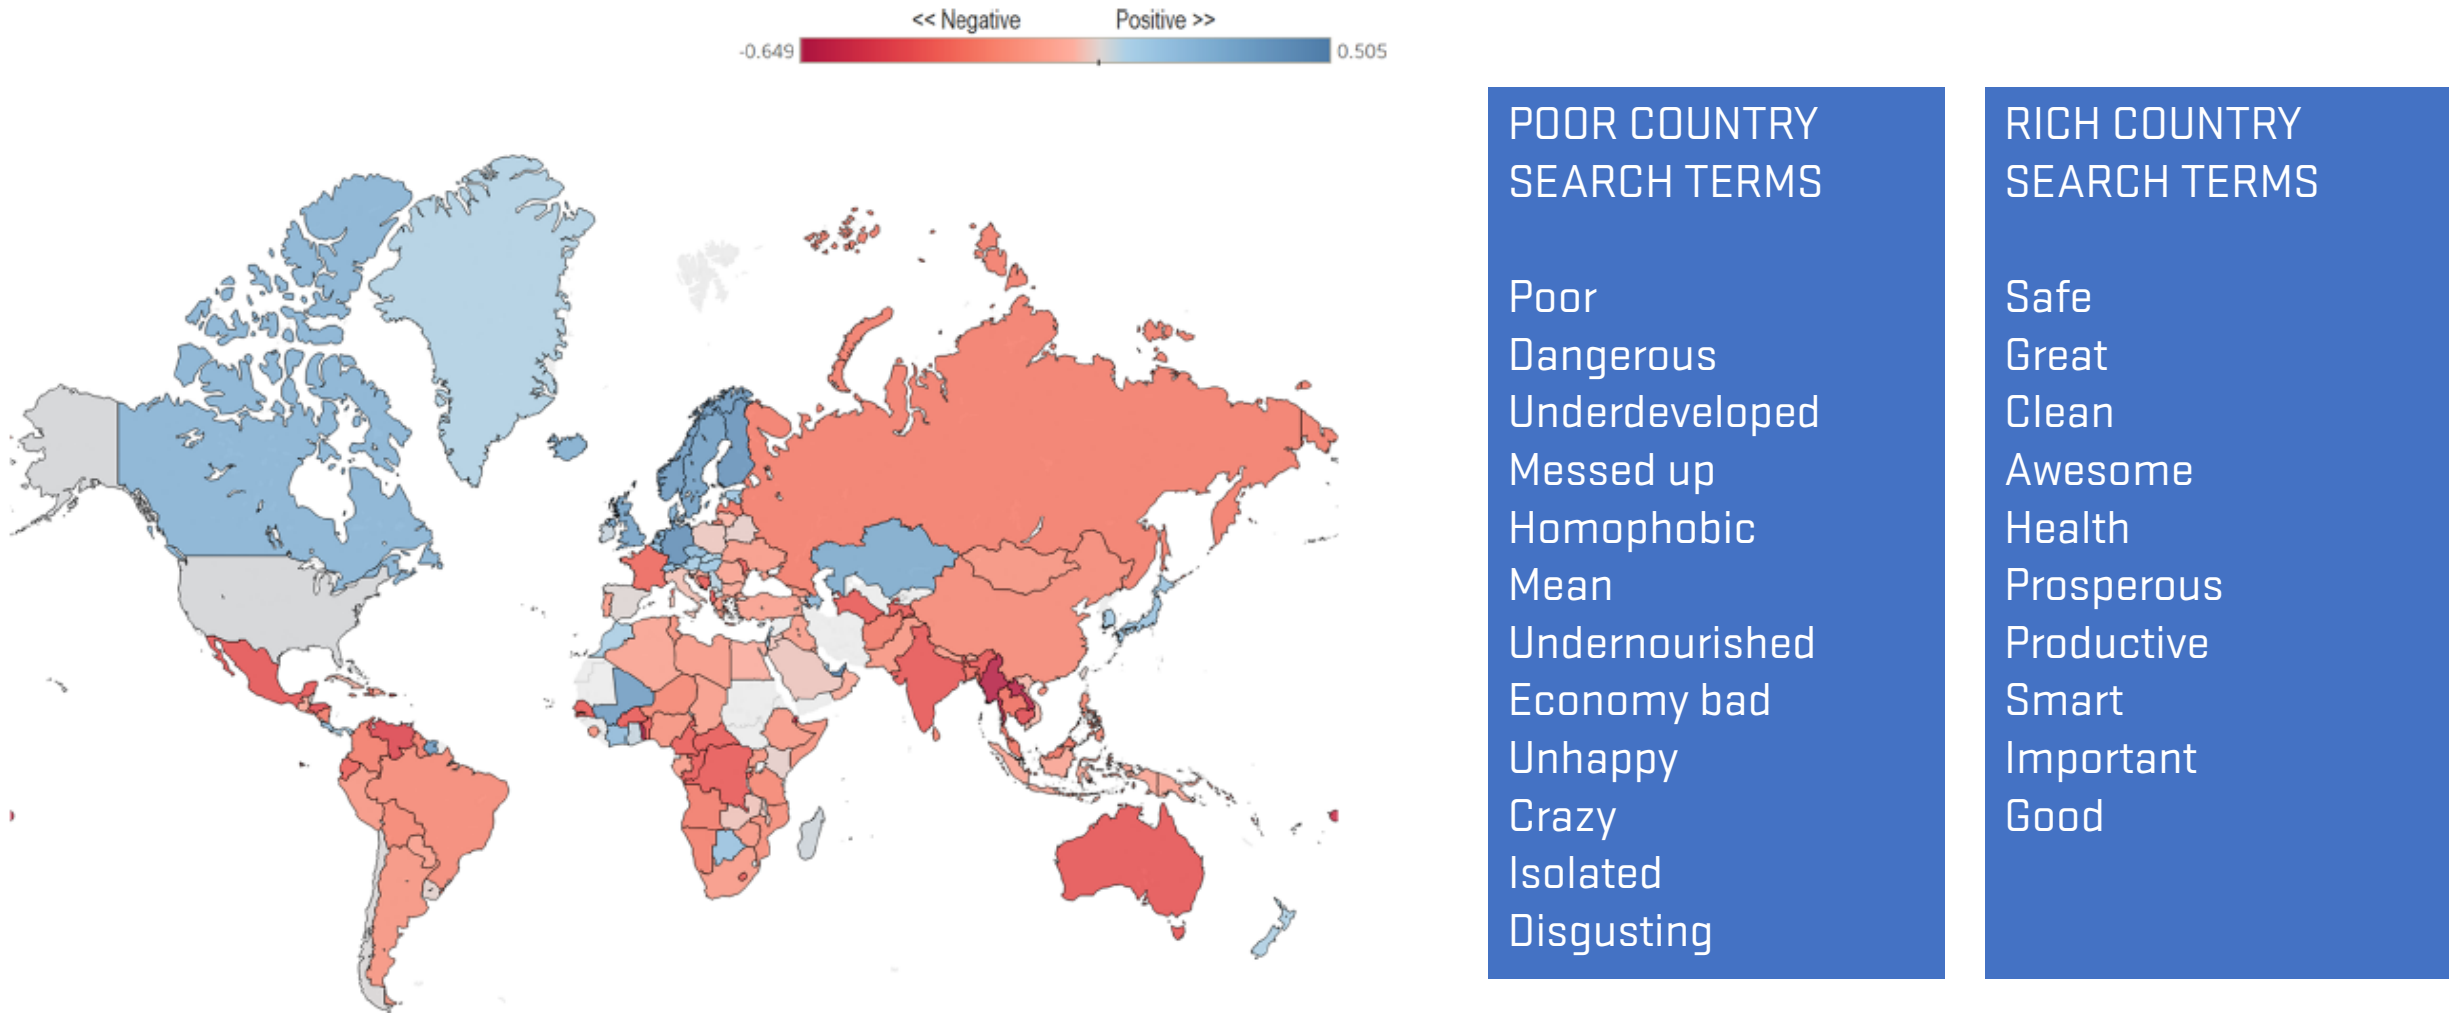

FIGURE 3. Average sentiment toward countries, according to Google search queries about countries

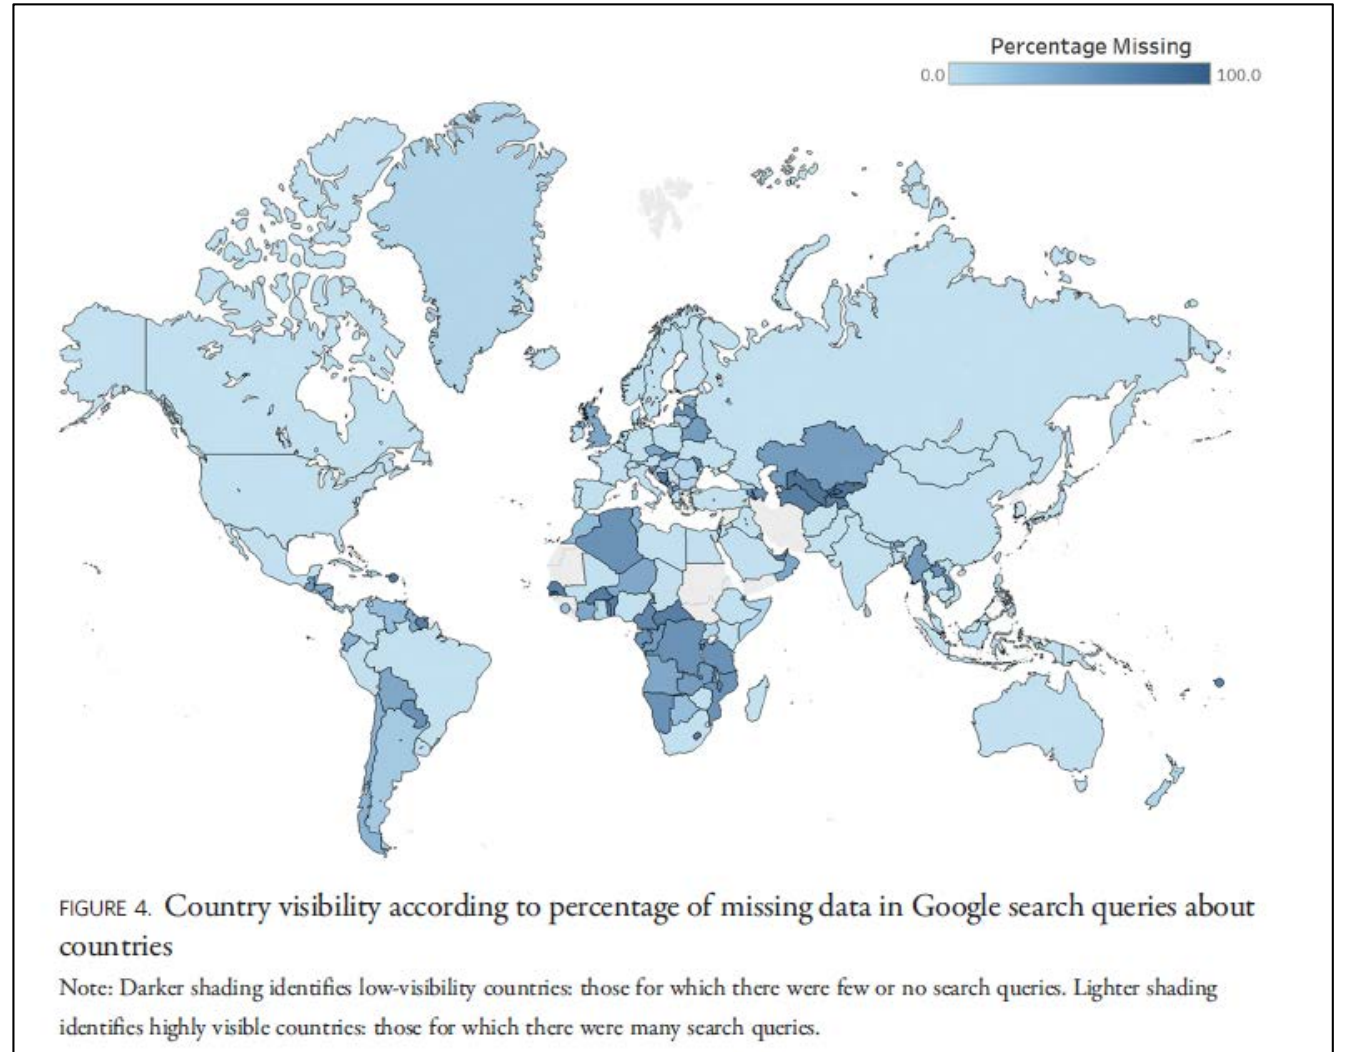

Dorius, S. & Swindle, J. (2019). *Developmental Idealism in Internet Search Data*. Sociology of Development.

A Developmental Worldview

The **less we know** about a place, the more negatively we perceive it.

The **less developed** a place, the more negatively we perceive it.

What might this mean for how people view rural places in the US?

QUESTION BREAK WITH LINDSEY & SHAWN

How Implicit Attitudes (Bias) Work

Attitudes in Theory

COGNITIVE:

What we *think* about someone or something

AFFECTIVE:

How we *feel* about someone or something

BEHAVIORAL:

What we (intend to) *do* to someone or something

Attitudes in Practice

COGNITIVE:

I think people are poor because they are lazy

AFFECTIVE:

Poor people disgust me

BEHAVIORAL:

I'm not going to administer the program in Poor Town because it will only reward bad behavior.

Do Place-based Biases Impact Your Work?

- People have well-developed perceptions of places
- Often highly stylized and stereotypical beliefs about urban and rural places
- Beliefs shape actions
- Place-based bias lives in the shadow of more visible biases

Place Bias and Extension:

1. Extension programming is largely place-based
2. Extension professionals, and the people they serve, are not immune to the effects of and exposure to place-based stereotyping

Place Bias in Extension Culture

It is difficult to change place bias, but a good starting place is to recognize it exists and be aware of our preferences, attitudes, and stereotypes about places and the people that live there.

Where do we start?

We can start with data

- Measure for presence of bias
- Both anti-rural and anti-urban (cosmopolitan)
- Correct for bias in our teams and in our data

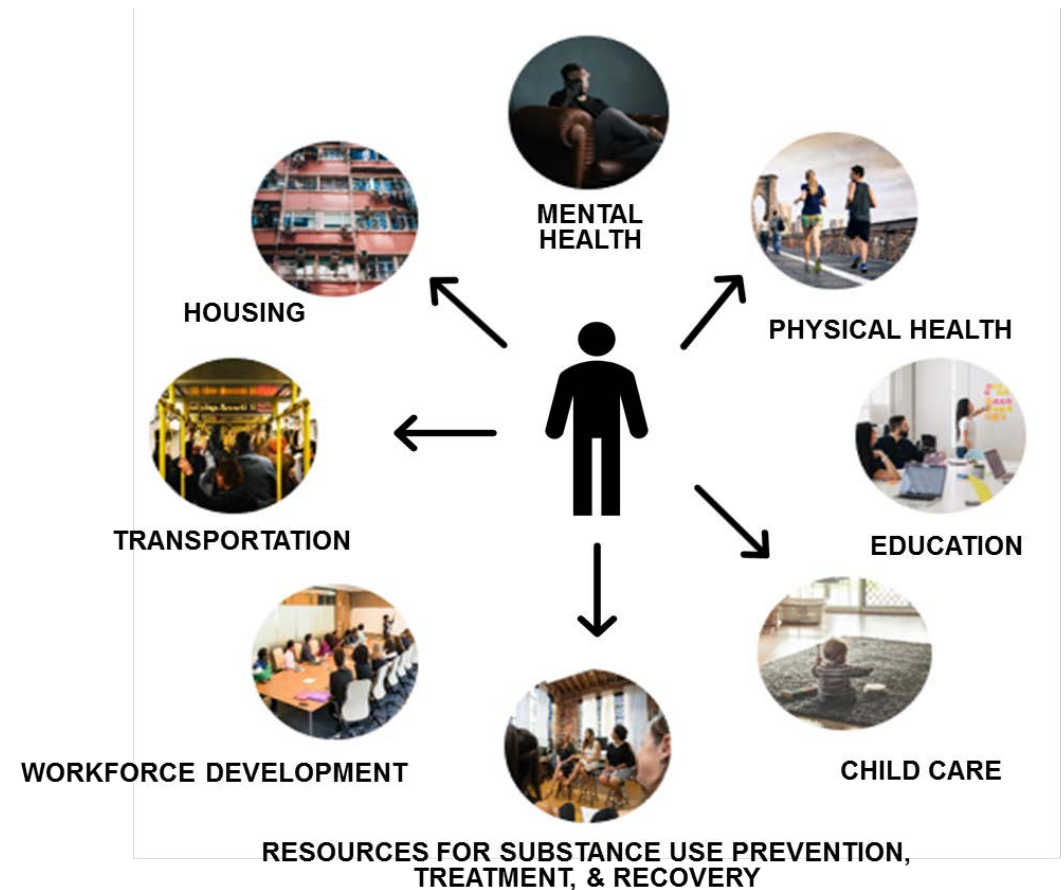

An aerial photograph of a rural landscape. The top half shows a large, rectangular field with a brown, textured surface, possibly a harvested crop field. To its left is a green field with small white flowers. A road runs along the right side of the brown field. The bottom half shows a green field with a dirt road curving through it, and a paved road intersecting it. There are trees and a building visible in the bottom right corner.

PLACE-BASED BIAS IN DATA

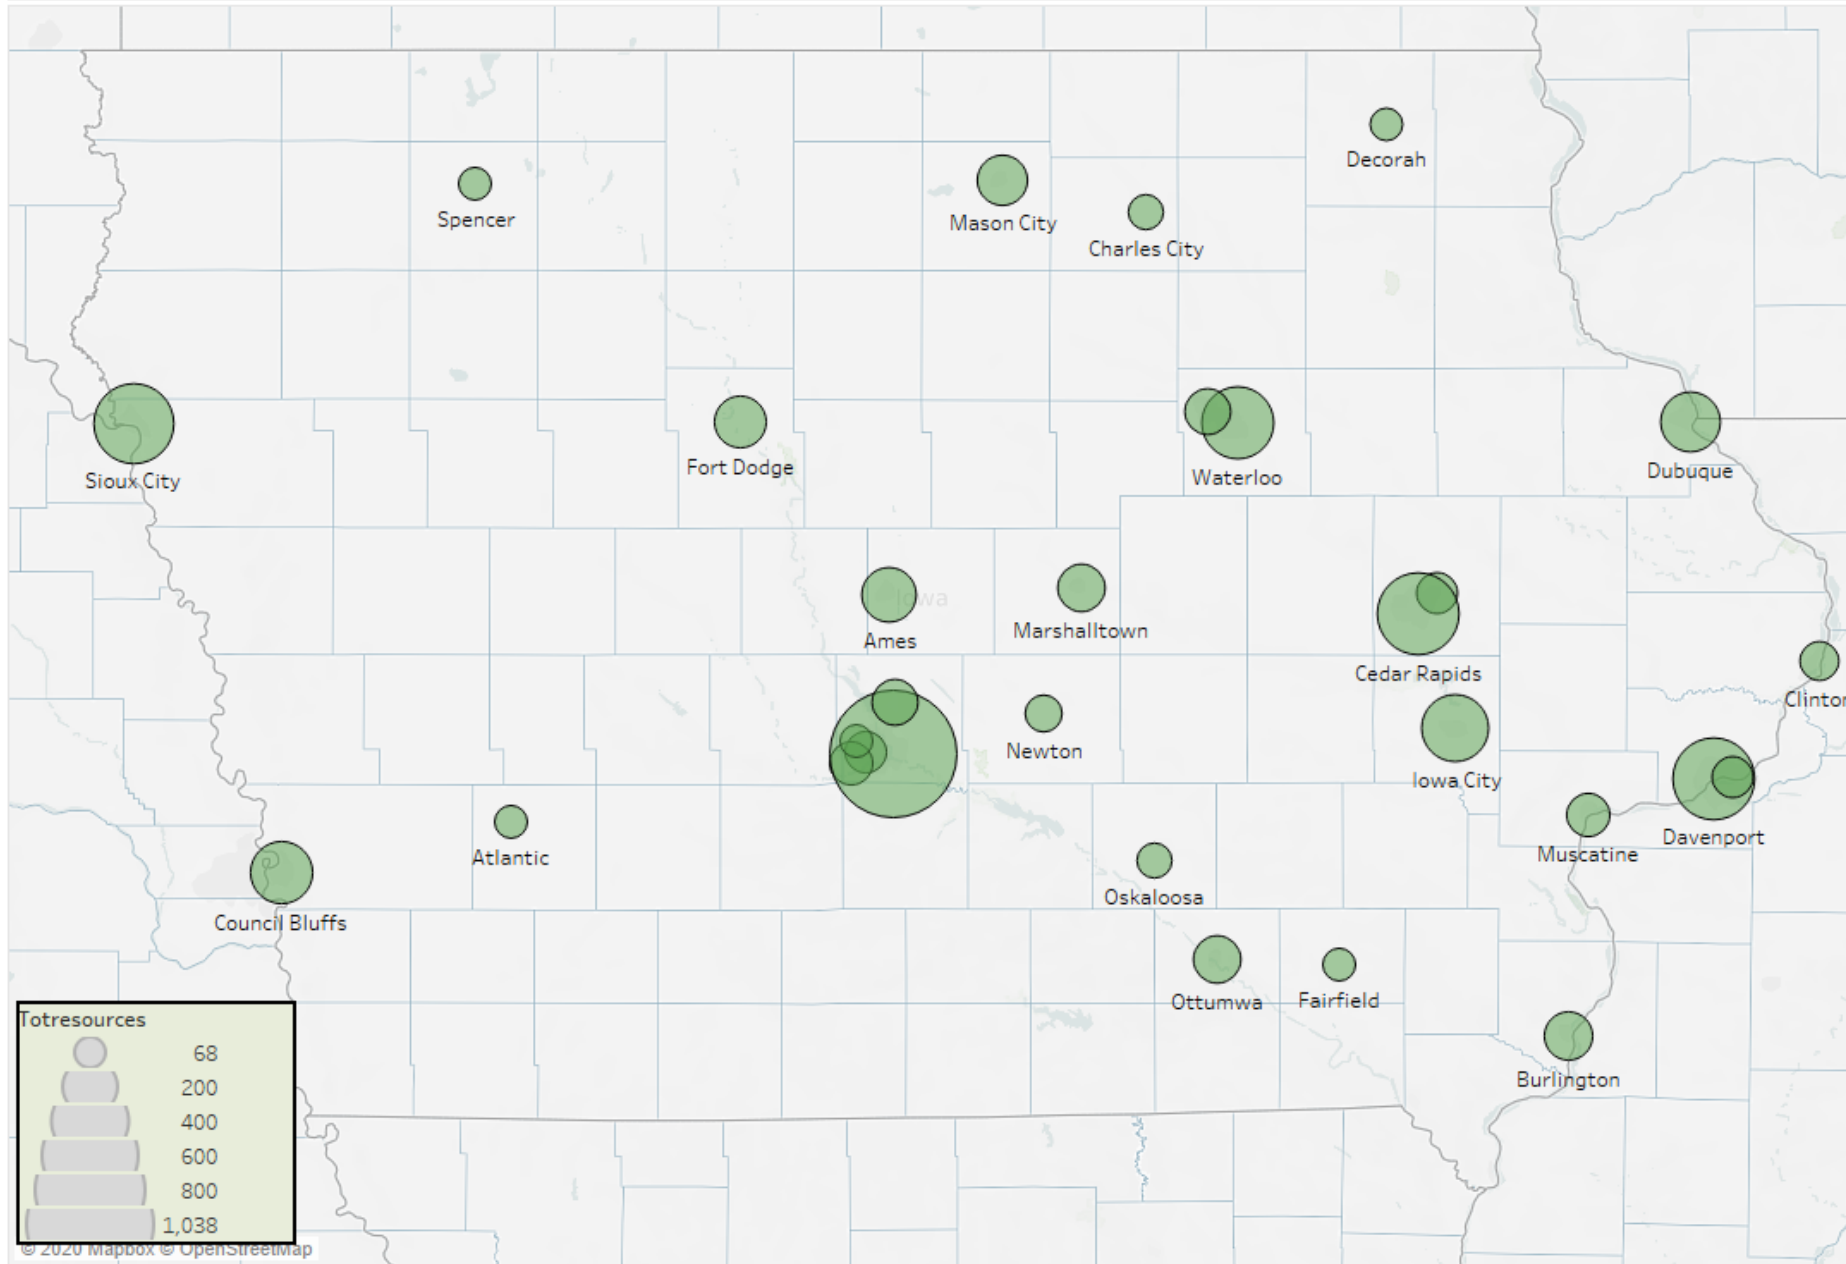

CASE STUDY #1

When Resources Matter: Identifying Recovery Ready Communities

- Community resources significantly predict substance use recovery
- We collected data on 17 different types of resources for every community in Iowa
- Over 15,000 individual resources were mapped and analyzed to identify Recovery Ready Communities in Iowa

Unadjusted Community Selection, Population Biased

Mapping recovery resources helped us to identify recovery hotspots & recovery infrastructure deserts

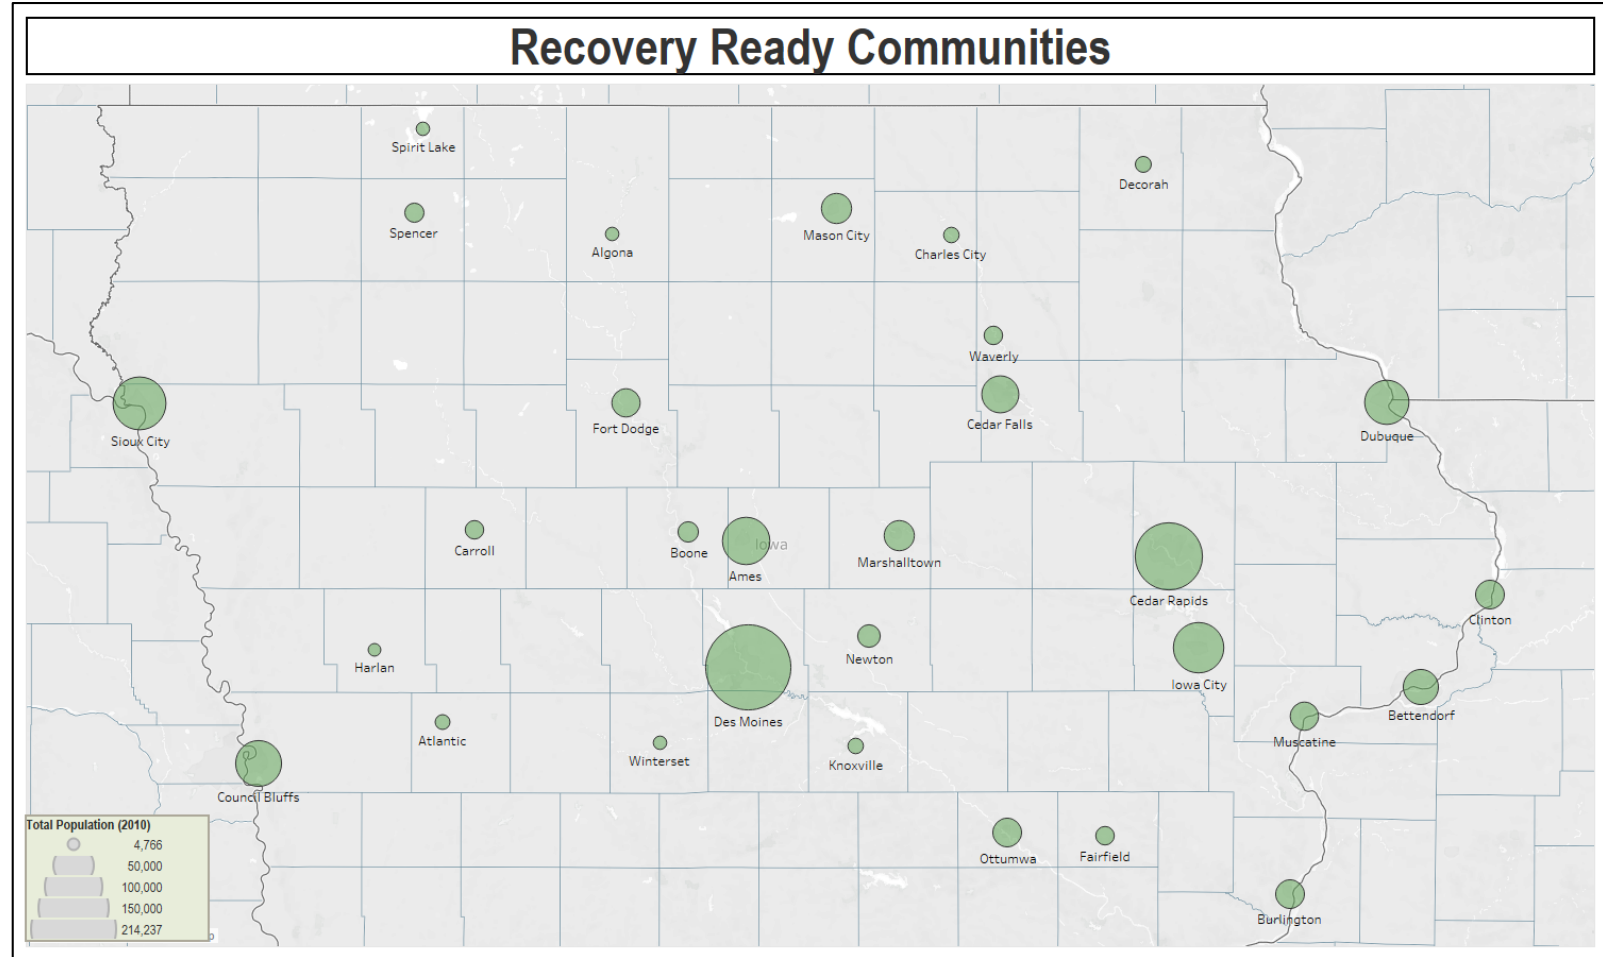

Larger circles identify larger number of total resources

But this approach favors large and populous cities

Totresources	
	68
	200
	400
	600
	800
	1,038

Tips for Correcting for Place Bias in Research

1. Include rural places in your sample
2. Use many different measures to capture strengths & assets of various groups and places
3. Adjust data for population size (e.g. per capita)

Result: Rural places were better represented. Initially, just 7 of 30 communities selected were small towns (populations of less than 15,000). After adjustment, 13 of 30 communities selected were small towns.

A group of diverse people are seated around a large wooden conference table in a bright, modern office setting. Several laptops are open on the table, and some individuals are looking at their screens. The room features large windows in the background, providing a view of a city skyline. A semi-transparent dark banner is overlaid across the middle of the image, containing the text 'QUESTION BREAK WITH LINDSEY & SHAWN' in white, bold, uppercase letters.

The bottom half shows a green field with a dirt road curving through it, and a paved road intersecting it. There are trees and a building visible in the bottom right corner.

PLACE-BASED BIAS IN THE WORKPLACE

CASE STUDY #2

WE ASKED TEAMS...

We measured top-of-mind associations about rural places among students in a data science training program

How can a data scientist help rural communities?

LISTEN LISTEN LISTEN! Hear what they need!

Deploy the resources that they have within their communities to solve the problems that they want to solve.

A data scientist can help present ways that the communities can overcome the challenges that they do face

We can collect the problems that they most want to solve, and then help them solve those problems with social source.

By working with them not by studying them

By collecting data and set measuring indicators and do data analytics and interpreting the result

Work with DSPG on the projects that we will be doing this summer and beyond

Find out what their main concerns are and figure out insights that help mitigate those concerns

Analyzing data from diverse sources but working with the local government

The same way a data scientist would help any other group - by informing the rural community, with data, about the issues they want to know about and presenting them with effective options for solving those problems.

Responses point to a collaborative, partner-oriented approach to community engagement (e.g. appreciative inquiry).

What is the worst thing about living in rural America?

**Deficit-based orientation toward rural places.
Focus on what is missing or deficient in rural places.**

Tips for Correcting for Place Bias in the Workplace

1. Embed opportunities in your workplace to become aware of bias
2. Discuss how bias might impact your outreach, study design, analysis, or results. Then keep discussing!
3. Employ strategies to break the habit of bias, such as:
 - Individuation
 - Perspective taking
 - Counter-stereotypic imaging

Abstract

We developed a multi-faceted prejudice habit-breaking intervention to produce long-term reductions in implicit race bias. The intervention is based on the premise that implicit bias is like a habit that can be reduced through a combination of awareness of implicit bias, concern about the effects of that bias, and the application of strategies to reduce bias. In a 12-week longitudinal study, people who received the intervention showed dramatic reductions in implicit race bias. People who were concerned about discrimination or who reported using the strategies showed the greatest reductions. The intervention also led to increases in concern about discrimination and personal awareness of bias over the duration of the study. People in the control group showed none of the above effects. Our results raise the hope of reducing persistent and unintentional forms of discrimination that arise from implicit bias.

Result: After perspective-taking discussion, students committed to explore asset-based approaches to data collection and analysis during their data science internship (e.g., Community Capitals + health resources).

WHAT IS LIFE LIKE IN RURAL AMERICA?

LET'S LOOK AT YOUR DATA

A group of diverse people are seated around a large wooden conference table in a bright, modern office setting. Several laptops are open on the table, and some individuals are looking at their screens. The room features large windows in the background that offer a view of a city skyline. A semi-transparent dark banner is overlaid across the middle of the image, containing the text 'QUESTION BREAK WITH LINDSEY & SHAWN' in white, bold, uppercase letters.

QUESTION BREAK WITH LINDSEY & SHAWN

VISION

- Build a data ready culture for community work
- Be aware of your own place-based biases, the biases of your teams, and the biases in your data (this is an ongoing and iterative effort)
- Be intentional about minimizing the harmful effects of these biases on others

GOAL

Better support the communities we live, learn, and work in by reducing place-based biases
