

Company Introduction

World Travel, Inc. is a global mid-market leader in corporate travel management. As the largest organically grown travel management company in the United States, we've grown steadily and sustainably since 1983.

We are 100% employee-owned, as well as entirely focused on providing our clients with superior service, state-of-the-art technology, consulting services, and customization to meet their business needs. World Travel's core services and capabilities reside in servicing corporate transient, groups and meetings, and leisure travel.

Job Description

Due to continued growth in our business, World Travel, Inc is seeking a highly motivated, experienced full stack GDS (Global Distribution System – Sabre & Apollo) developer. We are looking for someone who has worked with GDS web services. As an individual contributor, you will be working hand-in-hand with a veteran team of software developers who are creating exciting new products for client customers.

A successful candidate will have the following skillsets:

- Proven ability to quickly and efficiently solve complex problems.
- Demonstrate a "dev-ops as culture" mindset.
- Desire to work in a highly disciplined agile team, focused on continuous improvement.
- Ability to communicate technical concepts to non-technical personnel

- Experience building and supporting applications using modern cloud platforms and technology stacks (AWS, Azure, GCP, .Net/.Net Core/React.js/Node.js).

Duties

- Take on the most challenging aspects of software implementation, actively contributing code and creating the critical code foundation on top of which other members of the team can build.
- Architecting, developing, testing and deploying highly scalable distributed systems and data processes.
- Re-use existing software development practices where possible for productivity but also introduce new trending industry practices and tools where appropriate.
- Deliver needed project functionality for specific deliverables but deliver in such a way that the value is useful to the organization in the long term.
- Develop high quality, reusable code solutions for internal and external clients following SDLC best practices.
- Develop code and release in multiple environments in a timely manner.
- Maintain documentation and deployment procedures for existing applications.
- Implement, test, and debug software and web-based applications and new features for existing applications.
- Establish and socialize software development best practices.

- Mentor and coach other developers on the team to improve overall software quality and efficiency.
- Participate in providing performance feedback for development team members.

Required Skills

- Demonstrate proficiency in developing against Travel Global Distribution Systems using web services (i.e.: Galileo Web Services, Sabre Web Services).
- Experience with managing travel data throughout the life cycle of a reservation a plus (i.e.: Shopping, Booking, Reporting).
- 5+ years of experience with .Net Technologies, .Net Framework, .Net Core, and Web API with a proven track record.
- 5+ years of API development experience, including RESTful API development; must deploy a security-first focus with API services designed from the foundation to protect client data
- Experience in developing, deploying, and debugging cloud-based applications using AWS a plus.
- Experience in developing microservices and complex microservice-based platform architectures. An individual with knowledge of distributed network architectures and network security is required.
- Experience with source control systems such as Git/Github, Team Foundation Services (TFS), Subversion (SVN).
- Strong SQL experience, including ability to troubleshoot and optimize tables and queries in relational database systems (MSSQL, MySQL)

- Experience with architecting and supporting NoSQL back-ends (Mongo, DynamoDB) a plus
- Bachelor's Degree in Computer Science or Software Engineering preferred
