

With OpenLegacy, your FinTech possibilities are wide open

OpenLegacy enables FinTechs and established financial institutions to collaborate faster and more flexibly

Today's consumers expect instant access to information and services—if they don't get it, they move on. For established banks, keeping up with customer expectations is extremely challenging due to back-end technologies that aren't compatible with digital solutions. To retain their existing customers and attract new ones banks must fast track their consumer-facing service projects. Further complicating matters is the industry-wide push to embrace the latest FinTech innovations.

While striving to create these new applications and leverage FinTechs, organizations find themselves dealing with a backlog of API requests from their existing IT investments. Their integration processes are not fast enough to make a dent. Typically, they need to add more staff, learn too many tools, or deal with a complex integration stack.

On the flipside, FinTech organizations are challenged by lack of access to (and use cases with) large, complex organizations. Beyond proof of concept, they need to exhibit reliable scalability to get a seat at the table.

In both cases, OpenLegacy can help.

We take our role in driving the FinTech industry forward very seriously. Banks and FinTechs need to accelerate time to market to maximize customer value and retention. By leveraging modern technologies, OpenLegacy closes the gaps between the legacy systems and innovations.

**Zeev Avidan, Chief Product Officer
OpenLegacy**

OpenLegacy's Digital Driven Integration specializes in legacy systems and offers:

10x

faster API creation

75%

lower total cost of ownership

5x

better API performance

Improve the speed and success of your digital transformation

Using microservice-based APIs or serverless functions, OpenLegacy connects your back-end technology to the modern world—and FinTechs—quickly and easily. We cater to your specific challenges by bypassing existing layers of complexity, so you can generate digital solutions from your back-end technology with automation and agility.

With OpenLegacy, even the largest, most complex financial institutions can take advantage of FinTechs while reducing time-to-market. Plus, FinTechs have the opportunity to shine and scale. Innovative institutions. Happy customers. Welcome to OpenLegacy.

From end to end: value, time-to-market, and differentiation

OpenLegacy helps you become digital to the core by generating APIs that integrate to your systems, applications, and databases.

Bypass complex middleware, leverage your existing back-end investments, and accelerate your DevOps and agile initiatives. With a single, proven platform for the full modern API lifecycle you can create, test, and deploy your APIs faster than ever. It all results in reduced time-to-market for FinTech collaboration—giving you the innovative advantage you want.

Automatic code generation

Using templates, automatically extend backend objects into digital applications and REST APIs.

Direct connection to any legacy system

Automatically extract strong-type metadata from any core system.

Secure to the core

Leverage a combination of legacy security and digital security.

Multiple deployment options

Flexible deployment means the API can easily be consumed and re-used anywhere.

API Testing

Keep your pace with built in JUnit and JSON-based testing at development and run-time.

About

OpenLegacy's Digital-Driven Integration enables organizations using legacy systems to deliver new digital services 10x faster than ever before, so they can truly thrive in the digital age.
