CommSec
Sensible Cyber Security

POWERED BY TECHNOLOGY, LED BY EXPERTS

Managed Detection & Response

With our Managed Detection & Response (MDR) service, get the support your organisation needs to enhance visibility of and rapidly shut down cyber threats.

To minimise cyber security risk, being able to rapidly identify and respond to attacks is essential. **CommSec MDR** is an outcome-focused MDR service that supplies the **people, technology and cyberoffensive intelligence** required to hunt for threats across your organisation's networks & endpoints and help shut them down before they cause damage and disruption.

CommSec provide a fully managed security operations centre (SOC) which includes a Managed Detection and Response Service.

We have trained certified cybersecurity engineers who can assess those anomalies and immediately alert you and respond if something is amiss.

You benefit from our ability to use cutting edge tools, including Machine Learning/Artificial Intelligence, and our ability to stay on top of security trends, and from our security team's expertise and experience.
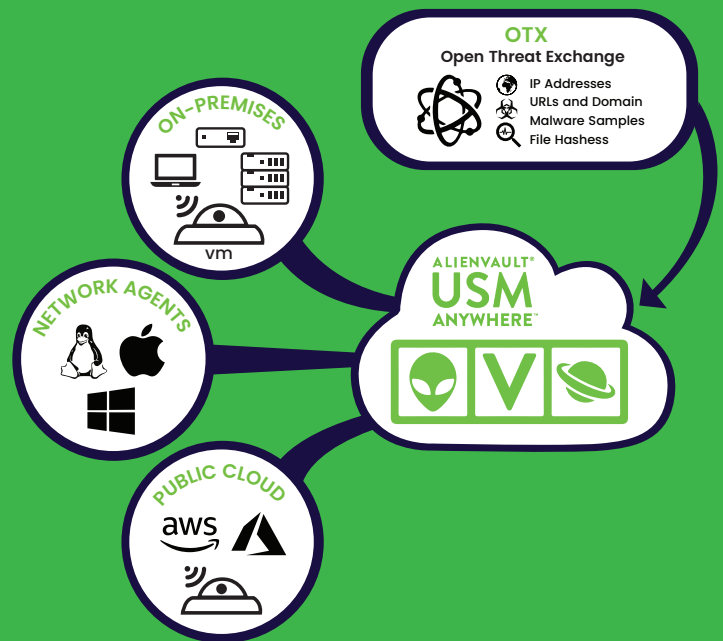

SOC AS A SERVICE

This involves the discovery of assets in your estate, we then provide continuous vulnerability assessments, intrusion detection and behavioural monitoring with a full Security Incident Event Management (SIEM). This includes Glacial Storage which is the untampered evidence that will stand up in a court of law should you wish to prosecute offenders.

"I can offer a high-level assurance at board level about our information security and reduced risk to our data. Commsec MDR gives greater visibility of our complex and changing environment and the protects us from the ever-increasing cyber threats.

Managed Detection & Response Benefits

REDUCE COST AND COMPLEXITY

Centralised security monitoring for your critical assets across cloud environments and on premises, including endpoints, networks, and cloud apps, to help you achieve security visibility while avoiding the cost and complexity of maintaining multiple security products.

EXTENSIVE THREAT VISIBILITY

Without awareness of activity inside your organisation's network, it can be impossible to know if systems and data are in danger of being compromised. CommSec MDR provides extensive threat visibility across on-premises, cloud and hybrid environments, 24/7/365.

CONTINUAL DETECTION OF ATTACKS

With the threat landscape constantly evolving, it's important to ensure that detection capabilities keep pace. CommSec leverages the latest security tools and threat intelligence to ensure your organisation is prepared to respond to current and emerging cyber threats.

EASES THE PRESSURE ON IN-HOUSE TEAMS

CommSec's Security Operations Centre experts manage and monitor all the security technologies included as part of CommSec MDR. By investigating and triaging all the alerts they generate, our analysts ensure that your in-house team is not burdened with the responsibility of around-the-clock threat detection.

ACCELERATES INCIDENT RESPONSE

A swift response to cyber incidents demands a high level of situational awareness. CommSec MDR ensures that members of your security team are not weighed down by irrelevant alerts and that when genuine incidents occur, they receive the actionable mitigation guidance and automated response actions needed to respond effectively.

REDUCES TIME TO MATURITY

By operating as an extension of your organisation, CommSec MDR enables you to quickly elevate security capabilities to enterprise level. The service helps to make processes more efficient, ensuring that important security events don't get missed, and your team is free to focus on other priorities.

FACILITATES COMPLIANCE

A proactive approach to threat detection is now required to achieve compliance with the latest regulations and standards. With CommSec MDR, you can quickly elevate your organisation's cyber security capabilities to a level needed to help meet the requirements of the GDPR, NIS Directive, PCI DSS, ISO 27001, and more.
