

VIRTUAL TECHNICAL LEARNING

Presented By Seaman Corporation

Seaman Corporation is a manufacturer of proven geomembranes used for applications which include impoundments, secondary containment, floating covers and diversion baffles. The XR® series is available in both industrial and potable grades and offers unique advantages based on the fabric reinforcing and the UV and hydrocarbon resistant polymer coating. The XR-5® has a track record exceeding **35 years** and is the choice among many designers and government agencies when a long term, low maintenance containment system is required.

Join us for a Virtual Lunch and Learn!

We are offering our technical learning program to design firms via Zoom. One PDH is awarded for participating!. Contact us for details or **Click [HERE](#)**.

PRESENTATION OUTLINE:

History of Geomembrane application in the US/Canada

Types and Manufacturing

Major uses of Geomembranes

Key design challenges when using Geomembranes

Comparison of features and properties of commercially available products

Typical Applications and Longevity examples

Video: See how XR has helped protect the treasured wildlife and natural resources at Mammoth Caves National Park for over 30 years.
