PROMO**

Thermi-Scan is a thermal analysis access control system that works standalone or integrates with existing access control to allow entry based on any combination of face recognition, normal temperature, mask detection and QR code or card entry.

The digital detection module supports rapid body temperature detection. This means that the product can achieve face recognition and temperature detection at the same time and supports warnings for people with an abnormal body temperature. It has a wide range of applications from offices & commercial buildings to school, restaurants and many more.

Key Features

- Non-contact detection
- Abnormal body temperature warning
- Measurement range between 86°F to 113°F
- Accuracy of up to 0.5°F
- Built-in deep learning dedicated chip
- Speed of Facial Recognition is 0.2 seconds
- Supports Face Recognition, Card or Fob
- Reader, Body temperature, Mask Detection and QR code authentication
- Two-way audio recorded
