

# Regulatory Information Requirements

## Call for Sponsors

**Be a leader in developing IFC standards to meet the common need for digital permitting of built assets.**

### Why it's important?

Regulatory approval processes are a major source of delay and risk for building projects worldwide. Moves to introduce information-based processes are hampered by the lack of standards around the specific information needed. Vendor-independent international conventions will encourage development and adoption.

### Purpose of the Project

This project brings together regulatory interests worldwide to add "Regulatory Information Requirements" to the scope of the ISO 16759 IFC standard and ISO12006-3 data dictionary resources. The ISO 19650 series of standards are being globally adopted. However, the need for information to be supplied to regulators is not subject to the same framework of preparation and negotiation.

The purpose is to ensure the buildingSMART IFC standard meets the common needs for building regulation. The Regulatory Information Requirements project work aims to deliver the following improvements:

- \* Improved communication between applicants and regulators \*
- \* Improved pre-checking of applications \*
- \* Improved compliance checking \*
- \* Improved turn-around of applications \*
- \* Improved accuracy and predictability of outcomes \*

## Opportunity for you

buildingSMART International is calling on industry sponsorship to fund the project. This exciting opportunity comes with a variety of benefits, including free membership for new members to bSI for the first 3 months.

Sponsors will:

- \* Be part of an international effort \*
- \* Collaborate with other industry professionals in project delivery and operations \*
- \* Be viewed as leaders in the development of new openBIM regulatory solutions \*
- \* Have global exposure through the bSI communications network \*

### Funding goal: €120,000

€10,000  
-  
€20,000

This level of sponsorship will help the project team initiate and develop the Regulatory Information Requirements project. Sponsors at this level benefit from:

- Free Standard membership to bSI for the first 3 months
- International recognition as a project sponsor
- A seat on the Project Steering Committee, as well as active development roles

€2,000  
-  
€10,000

This level of sponsorship allows your organization to participate in the development of this international standard as an active member of the project Requirements or Technical Team.

**To become a sponsor, please email: [regulatory@buildingsmart.org](mailto:regulatory@buildingsmart.org)**
