

basecase

Secure symptom tracking for COVID-19.

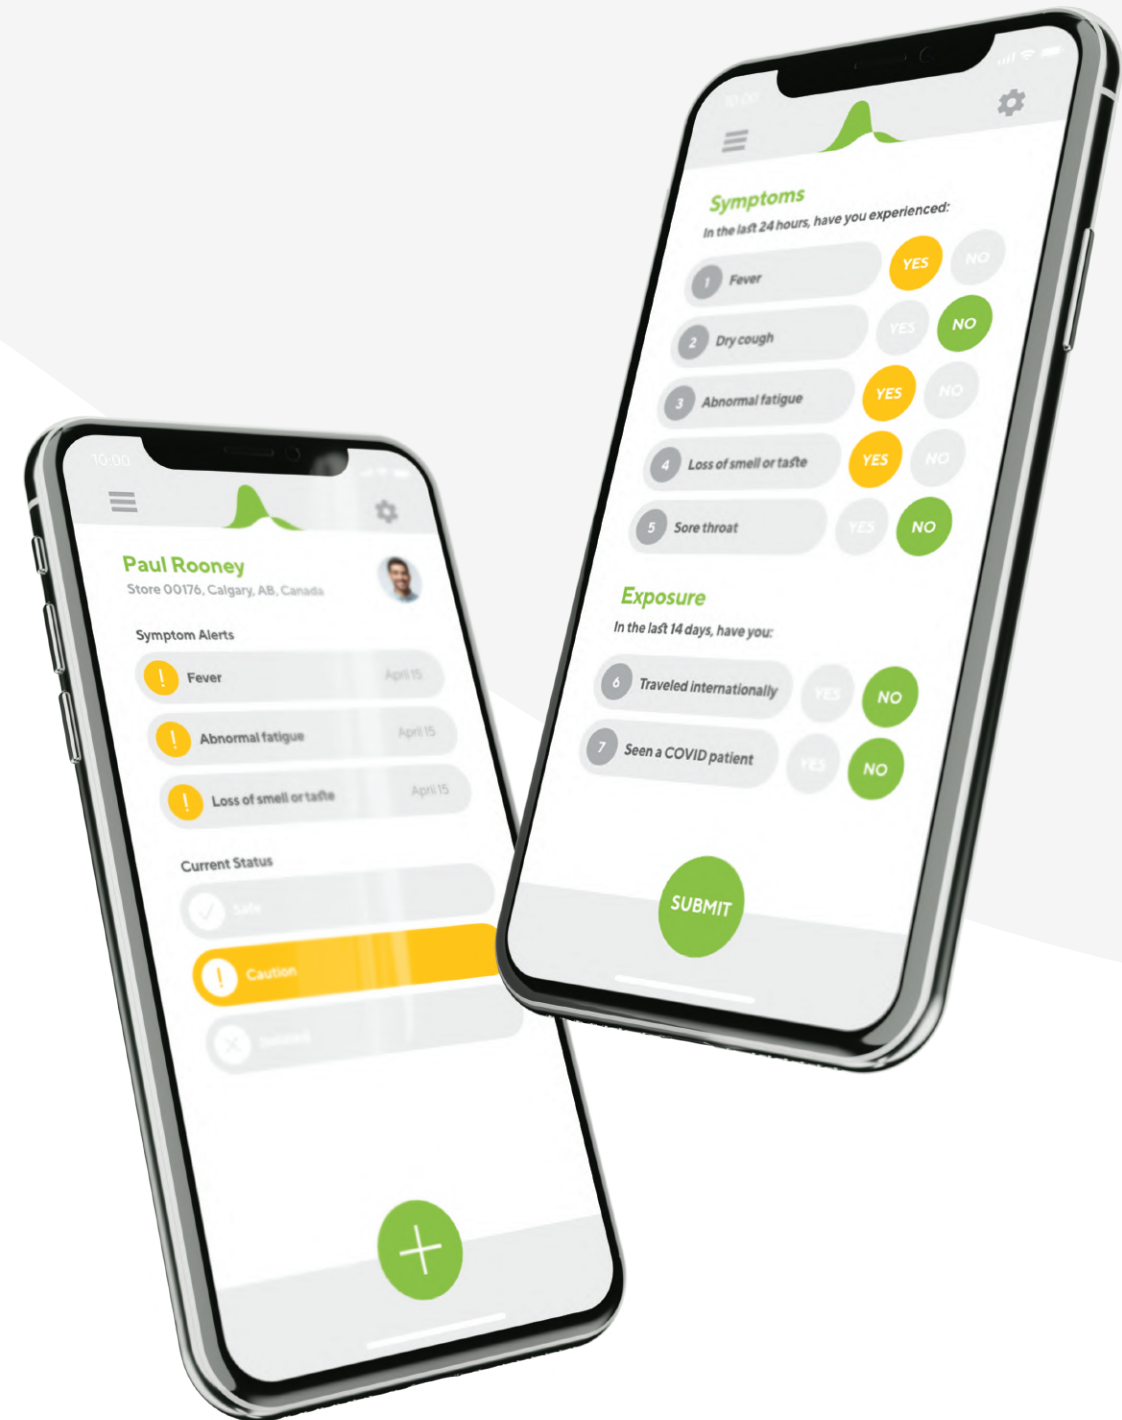

Protect your staff.

Keep facilities open and safe with digital forms and tracking.

Basecase is an application that enables staff to submit secure, daily logs of symptoms and exposure factors for COVID-19.

Alerts and tracking can enable managers to achieve earlier detection and planning, mitigating your operational risk.

Symptoms
In the last 24 hours, have you experienced:

1	Fever	YES	NO
2	Dry cough	YES	NO
3	Abnormal fatigue	YES	NO
4	Loss of smell or taste	YES	NO
5	Sore throat	YES	NO

Exposure
In the last 14 days, have you:

6	Traveled internationally	YES	NO
7	Seen a COVID patient	YES	NO

SUBMIT

Safe submissions.

Replace in-person paper forms with digital forms at home.

Basecase forms enable you to track the best known predictors of COVID-19.

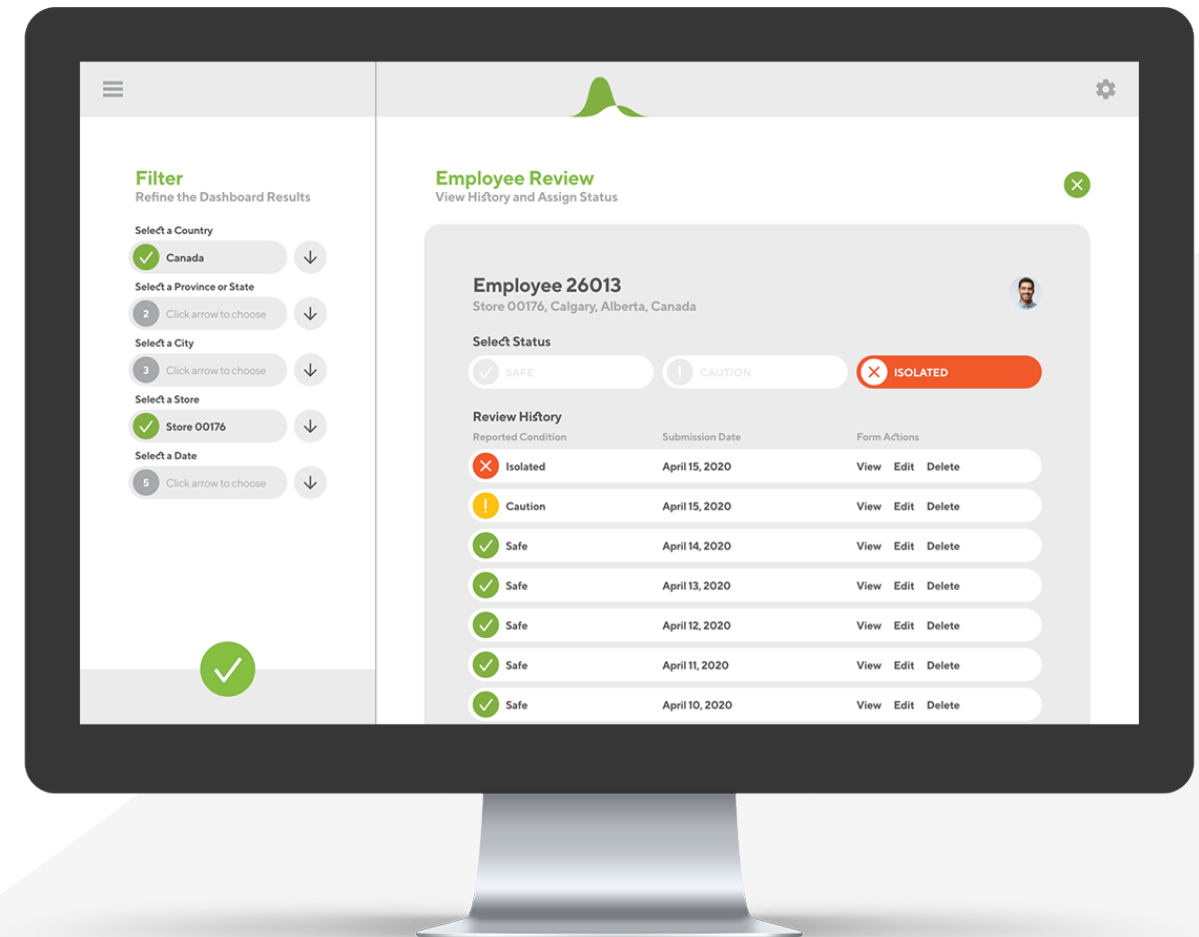

Your staff can identify their symptoms and exposure by submitting forms on their smartphones at home. This can limit your transmission risk before every shift begins.

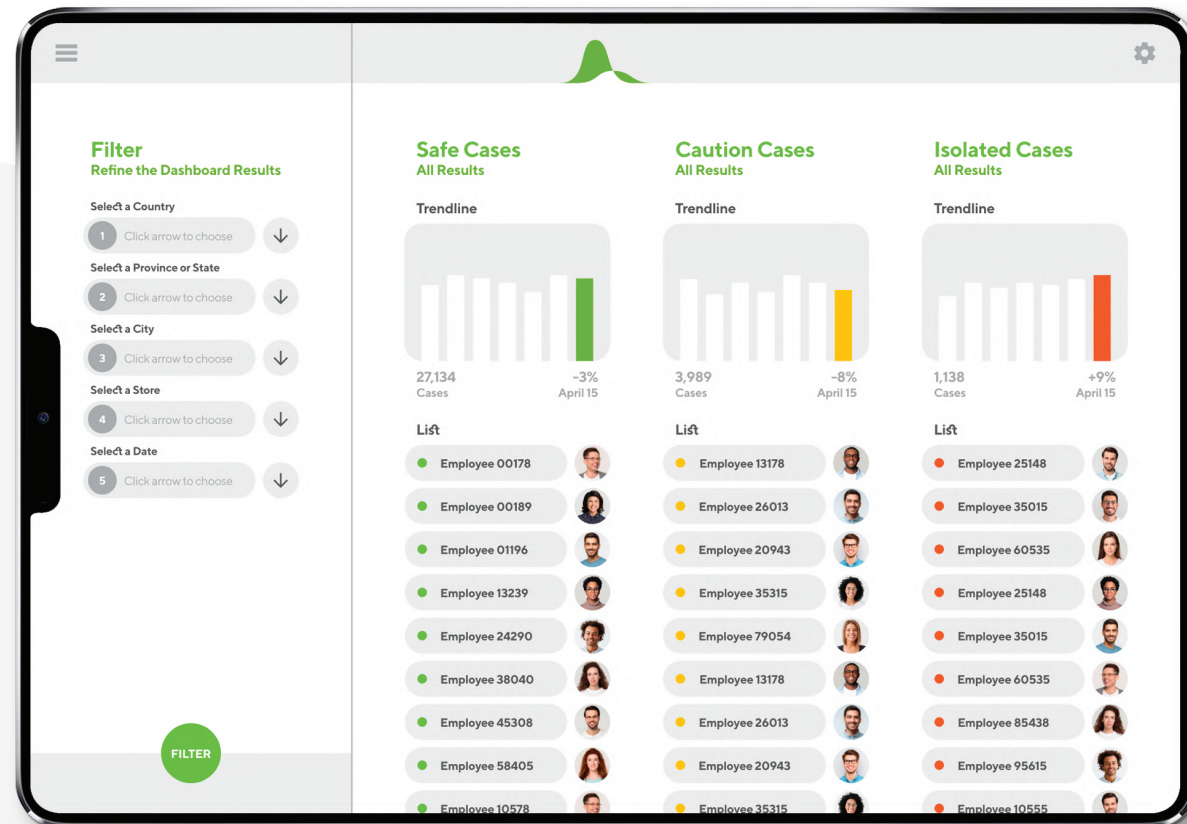

Early detection.

Ensure your managers are the first to know of symptoms.

Basecase generates an automatic alert as soon as a user flags a symptom or exposure.

You can assign specific managers to receive alerts, review submissions, and sort users among three safety categories. This enables proactive controls before public outcomes.

Know your risk.

To prevent broad shutdowns, track cases at specific facilities.

Your Basecase dashboard enables you to track changes in staff safety through case lists and trendline charts.

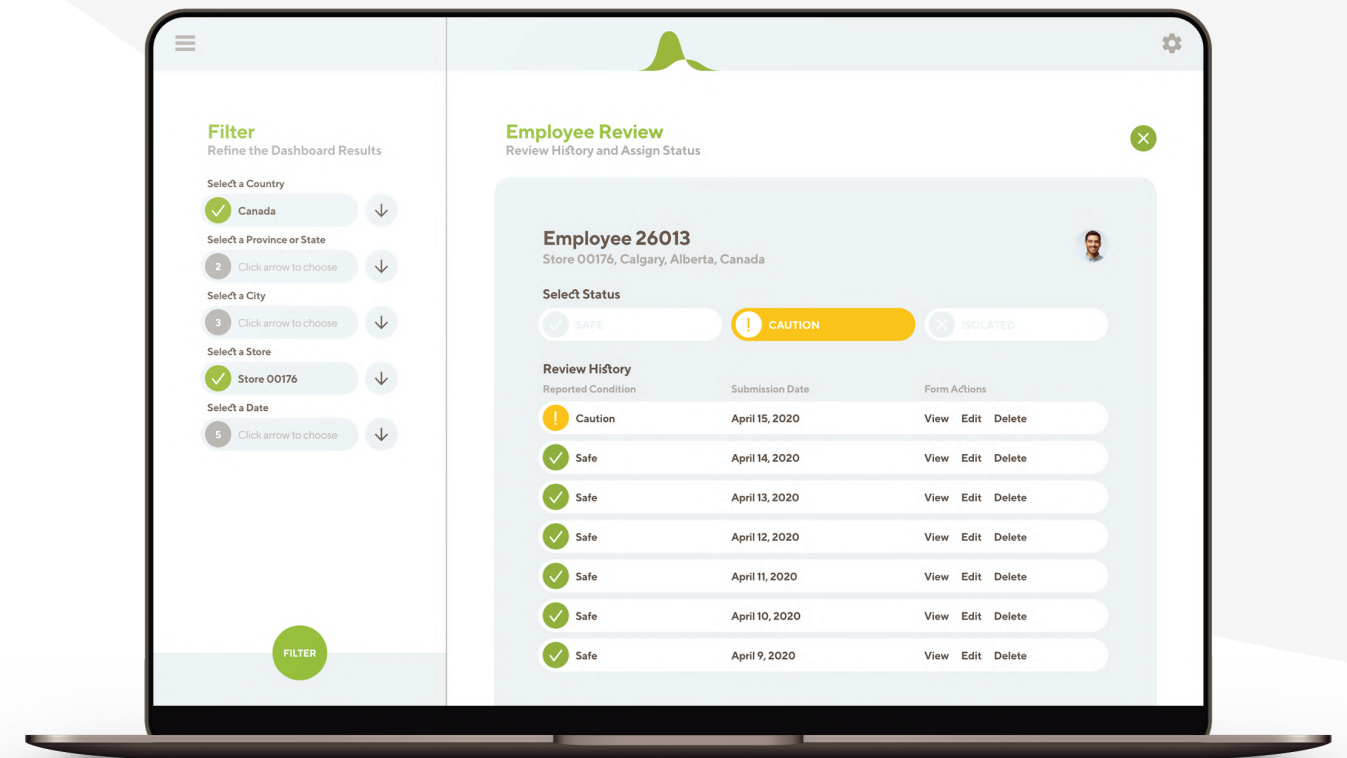

Filter your dashboard by location, and use targeted safety data to make plans specific to geographies or facilities.

Privacy ensured.

We score 100% on all four categories of cyber security.

Basecase encrypts every file with 4,096-bit keys. It would take a modern computer over 1,000 years to crack a single key.

Whereas many common platforms such as Facebook only score a B security rating, your data will be stored with an A+ rating.
