# Unlock the Best of Cloud

With a Data Fabric You Can Deliver Your Data Where, When and How You Need It

Your data is anywhere and everywhere, in every form imaginable. And it's growing by the minute, stored in public clouds, private clouds and on premises. Your teams depend on it to do their jobs. Your business depends on it to survive and thrive. And now you can design your data fabric to deliver it where, when, and how you need it.

What is Data Fabric?

Data fabric is an architecture and set of data services that provide consistent capabilities across a choice of endpoints spanning on-premises and multiple cloud environments.

Data fabric simplifies and integrates data management across cloud and on-premises to accelerate digital transformation. It delivers consistent and integrated hybrid cloud data services for data visibility and insights, data access and control, and data protection and security.

Why Data Fabric?

In a world where technology is changing our everyday lives, digital transformation tops the strategic agenda in most organizations. To successfully transform, data is becoming the lifeblood of an organization, seamlessly flowing to enable new customer touchpoints, create innovative business opportunities, and optimize operations.

Leaders are under tremendous pressure to harness today's wealth of data and apply it to create new value across the entire organization—all with limited time, skills, and budget. At the same time, data is no longer locked away on devices hidden behind firewalls. Instead, it is becoming distributed, dynamic, and diverse—and the resulting amount of data is overwhelming and incredibly difficult to manage.

Thriving in this environment requires creating a data-centric organization, which is no small undertaking. It also requires a holistic approach to managing data that is secure, efficient, and future-proof, while providing freedom of choice across major public clouds.

What Can Data Fabric Do For You?

A Data Fabric solution by ePlus and NetApp ultimately helps your organization unleash the power of data to meet business demands and gain a competitive edge. It allows your IT organization to better harness the power of hybrid cloud, build a hybrid multicloud experience, and modernize storage through data management.

With a data fabric solution by ePlus and NetApp, you can take control of your enterprise systems, software, and services to deliver the single, connected experience you crave. To learn more contact: netapp@eplus.com

About ePlus & NetApp:

Together with NetApp, ePlus helps you optimize your most valuable asset. Using NetApp technology, ePlus creates innovative solutions to help you accelerate data driven digital transformation around your own data fabric. Our experienced engineers help you architect, build, and manage a multi-cloud environments that provide seamless access to your data so you can deliver better business outcomes.
