& Insights

Our Clients Call It 'Game Changing'

ActivityStudio® makes it easy to develop and execute audit, self-assessment, inspection, evaluation, certification, checklist, and survey programs to drive Operational Excellence in any facility, restaurant or retail location.

Intuitive, Visual Form Builder

Drag-and-drop to create any activity, from complex audit forms with automated repeat detection, to simple checklists and surveys. Improve efficiency and accuracy with conditionally-driven questions, built-in timers and much more. Link questions to policies and SOPs to reinforce brand standards and promote best practices and know-how.

Area Management for Multiple Locations at One Site

Targeted for facilities such as hotels where there are multiple sites that require routine food safety and cleaning routines (kitchens, bars, lounges, conference rooms). Organize activities around specific areas within a location and schedule tasks for shifts and equipment that are unique to these areas.

Flexible Workflows

Configure repeatable business processes with flexible and automated pre- and post-activity workflows. Leverage settings for assignments, notifications, reminders, escalations, and report distribution to ensure program execution and improve operational efficiency.

Design and Schedule Activities for Shifts and Specific Equipment

Create and schedule activities to be conducted at each location during specific times of the day. Activities and questions can be added or modified dynamically based on active equipment in a location.

Automated Scheduling

Set and monitor recurring schedules for your programs and activities. Ensure your team understands key organizational goals and is working toward them by completing necessary activities across all your locations.

Web and Mobile Optimized

Work online or work untethered. Perform activities when connected or offline with native apps for Windows, iOS, and Android.

Integrated Policy Management

Quickly and easily create your brand standards, policies, and procedures and training documentation with our integrated Policy Management solution.

PolicyStudio includes a visual designer, rich text editor, and document and media storage, so you can easily and confidently publish your materials to specific user groups or company-wide in real-time.

Automated Report Writing & PDF Report Generation

Automatically create reports that are quickly converted to PDF documents and sent to multiple people in your organization with the click of a button and a digital signature.

Temperature Monitoring & Integrated IOT

Seamlessly connect with Bluetooth Low Energy (BLE) devices including barcode scanners, temperature probes, digital scales, and other IOT devices. Integrate with sensor networks.

Automated, Closed-loop Corrective Actions

Define the protocols for addressing and reviewing Corrective and Preventive Actions (CAPAs). Provide recommended actions and enforce timeframes to respond by criticality.

Powerful, Actionable Insights and Reporting

Data visualization, KPIs, and reports provide program status and actionable insights for every level of your organization. Set rules to bin locations, identify non-compliant areas within locations, or measure performance of products and employees against defined program goals.

Leverage the same operational efficiency software
some of the world's best known brands trust

The screenshot displays the CMX software interface on a tablet. The top navigation bar is blue with the CMX logo on the left and a user profile icon labeled 'JT LOCATION' on the right. Below the navigation bar, the 'Activity' section is active, showing tabs for 'Summary', 'Activity Form', and 'Activity Findings'. A horizontal menu lists various categories: 'FOOD SAFETY', 'PRODUCT QUALITY', 'SERVICE/LOCATION OPERATIONS', 'CLEANING AND MAINTENANCE', 'MISCELLANEOUS', 'SAMPLE QUESTIONS - DEMO', and 'HACCP'. The 'SAMPLE QUESTIONS - DEMO' tab is selected, showing '(6 of 42)' questions. The main content area is divided into two panels. The left panel, titled 'Demo Audit Form', lists several audit items: 'Sample', 'Kickplates on doors are clean and in good condition', 'All chrome should be shiny with no smudges or scratches. Cool right?', 'Chicken Finger Portion Control - Weight:', 'Board Cooler Temperature 1:', 'Please rate your satisfaction on a scale of 5-1 (5 being the highest)', and 'Please select the most appropriate'. The right panel, titled 'Sample', shows the details for the 'Kickplates on doors are clean and in good condition' item, with response buttons for 'YES', 'NO', and 'N/A'. Below this, the 'All chrome should be shiny with no smudges or scratches. Cool right?' item also has 'YES', 'NO', and 'N/A' buttons. The 'Chicken Finger Portion Control - Weight:' item has input fields for 'OZ.'.

The Checkers logo is a red oval with the word "Checkers" in white script. Below it, in smaller yellow text, is "CRAZY GOOD FOOD". The logo is set against a background of a checkered pattern in black, white, and red.

*“My jaw dropped when I saw how integrated **ActivityStudio®** already was – so many things are automatically taken care of through simple configurations and automation.”*

What used to take hours can be accomplished in minutes. And with one platform, we have one system and no silos. **ActivityStudio's™** user experience and user interface is cleaner and has a better flow, and it's incredibly easy to use. Our decision simply came down to **ActivityStudio™** and CMX as a partner, being a better fit for our business.

Danielle Williams
Operations Services Manager
at Checkers & Rally's

"We are seeing much faster response times in identifying and addressing root causes for issues"

We chose to work with CMX because of their proven technology platform, innovative design, and vision for **ActivityStudio™**. **ActivityStudio™** gives us the ability to make updates and implement them to our system immediately. That flexibility and agility is critical when it comes to food safety and quality, which are paramount to Firehouse Subs and our brand mission of excellence.

"The technology is as amazing as it is impactful"

I am super proud to have been one of the first companies to pilot **ActivityStudio™** as part of our global implementation of the CMX1 platform for conducting Global Security audits. The technology is as amazing as it is impactful to the way we manage our risks across our supply chain.

Nicholas Matlach
Director, Global Security
Compliance at Hasbro

“The impact on Operational Excellence has been impressive and immediate.”

We consider **ActivityStudio™** to be a game-changer. With **ActivityStudio™** we are better able to manage and maintain high-quality standards and consistency across all of our sports bars. **ActivityStudio's** intuitive interface makes it very easy for our team to develop and execute programs to ensure all sports bars are compliant and operating with consistency.

Drew Roberts
Director, Brand Ops Performance
at Buffalo Wild Wings
