

Organize your permitting process from start to finish and keep track of every step along the way

Building and Construction Permitting

Permits and inspections are often required for commercial and residential development to ensure safety and code compliance. In most types of construction, this is a mandatory phase with higher volumes in a growing economy. Processing more permit applications in a shorter amount of time cuts costs and enables communities to build more as they grow.

Plan Management

Organize planners and various departmental reviewers to ensure a streamlined and efficient process from start to resubmittal to approval. Our Permitting solution gives your agency the ability to keep builders apprised of the status of their reviews without wasting valuable staff time.

Permit Management

Within the process from application to approved permits for building and construction, there are many steps. Without automation, this process is lengthy and costly for both the agency and the builder. The lack of visibility into the process makes it hard for builders to manage resources, budgets, and timeframes.

Automate and connect critical processes, streamline workflows, improve communication, and increase productivity with our Permitting solution for Building and Construction.

- *Review construction documents and issue permits*
- *Register contractors and verify credentials*
- *Inspect construction to verify compliance with building codes and permit requirements*

Code Enforcement

Ensure compliance with municipal code and regulations by managing complaints and violations to achieve resolution quickly and efficiently.

Reviews and Inspections

Perform onsite inspections from mobile devices, enabling inspectors to stay in the field, reducing effort and errors, and increasing the number of inspections performed in their workday.
